Apple Watch & watchOS 10

Apple Watch & watchOS 10 Tricks & Tips is the perfect digital publication for the user that wants to take their skill set to the next level. Do you want to enhance your user experience? Or wish to gain insider knowledge? Do you want to learn directly from experts in their field? Learn the numerous short cuts that the professionals use? Over the pages of this new advanced user guide you will learn everything you will need to know to become a more confident, better skilled and experienced owner. A user that will make the absolute most of their watchOS use and ultimately their Apple Watch itself. An achievement you can earn by simply enabling us to exclusively help and teach you the abilities we have gained over our decades of experience.

Over the page our journey continues, and we will be with you at every stage to advise, inform and ultimately inspire you to go further.

> "The Apple Watch is by far the most popular smart watch in the world. It's packed with features, and integrates seamlessly with your Apple ecosystem. This book shows you how to go further with your Apple Watch…"

System Requirements

To upgrade your Apple Watch to the new watchOS 10, it must meet the following requirements:

Watch Series 4
Watch Series 5
Watch SE (2020)
Watch Series 6
Watch Series 7

Watch SE (2022)
Watch Series 8
Watch Ultra
Watch Series 9
Watch Ultra 2

Some watchOS 10 features have higher system requirements. For the health feature Time in Daylight, you need an Apple Watch SE (2nd gen), Apple Watch Series 6 or later or any Apple Watch Ultra. The Double Tap gesture needs an Apple Watch Series 9 or Apple Watch Ultra 2.

Your Pre-Installed Watch Apps

One of the best things about your Apple Watch is the apps that come bundled with watchOS. These software applications, or apps, are already there when you first set up your Apple Watch. You don't have to do download and install them. Most of these apps are companions to the apps you use and enjoy on your iPhone, such as Messages, Mail, Music, Calendar, News, Podcasts, Maps and more. Others are Apple Watch only, like Walkie-Talkie and Sleep. In this section, we show you how to make the most of these apps and get more from your trusty Apple Watch.

Photos on Watch

Apple Watch's Photos app is great for reviewing your snaps on the smallest screen. All you have to do is sync an album and/or Memories from your iPhone to your Apple Watch. Then you can view the pics, zoom in on them and even create a new watch face; directly from your watch's Photos app. Here's how to make the most of this interesting feature.

3:05
Apple Watch

Syncing a Photo Album

You can sync one album from your iPhone to your watch, and also sync Memories and featured photos. Why not create a new album, call it Apple Watch, and keep all the images you wish to sync in one place?

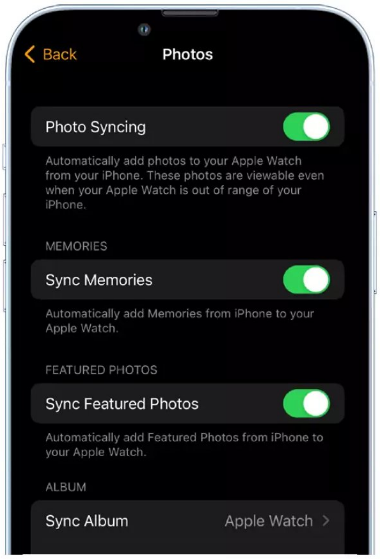

Photo Syncing ●

Automatically add photos to your Apple Watch from your iPhone. These photos are viewable even when your Apple Watch is out of range of your iPhone.

MEMORIES

Sync Memories ●

Automatically add Memories from iPhone to your Apple Watch.

FEATURED PHOTOS

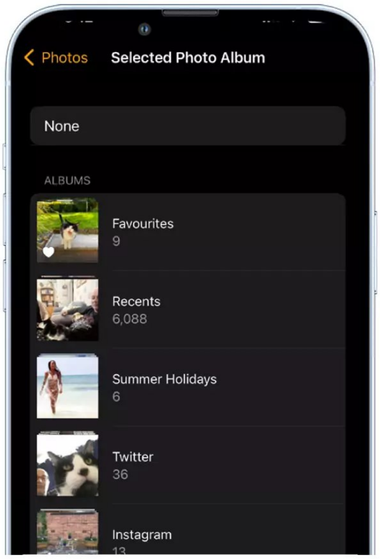
Sync Featured Photos ●

Automatically add Featured Photos from iPhone to your Apple Watch.

ALBUM

Sync Album: Apple Watch >

1 First of all, open your Watch app on your iPhone, and go to My Watch > Photos. The first three items there are on-off switches. In order (top to bottom), these are; Photo Syncing, which lets you automatically add pics to your Apple Watch; Sync Memories, which syncs your photo app's memories to your watch; and Sync Featured Photos.

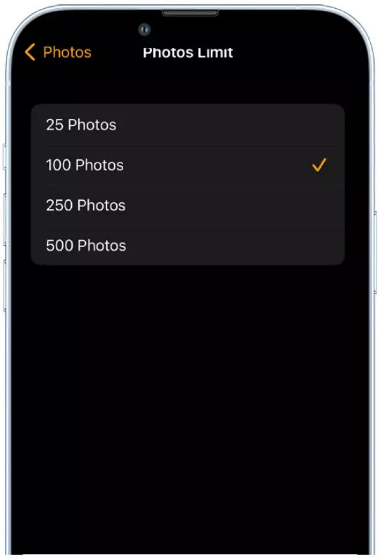


None

ALBUMS

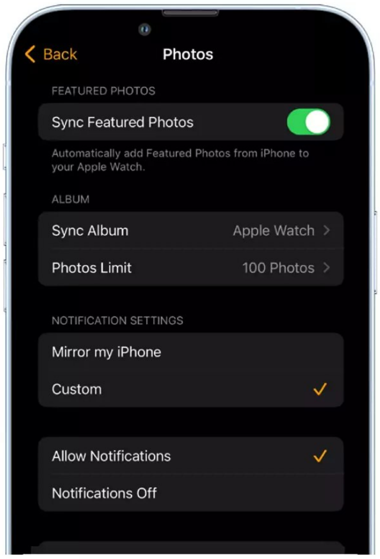
Favourites 9
Recents 6,088
Summer Holidays 6
Twitter 36
Instagram 13

2 In the Album section of this page, tap Sync Album and choose an album in your iPhone's Photos app to sync with your Apple Watch. Just scroll up and down the page, and tap the album you want to tick. To change the album on your watch, tick another. Scroll to the top of the page and tap None to remove all albums from the watch.



25 Photos
100 Photos ✓
250 Photos
500 Photos

3 To prevent your watch filling up with too many pictures, there's a limit on the number of photos you can sync. By default this is 100 photos, but you can change this figure by going to My Watch > Photos > Photos Limit and choosing another figure. If you plan to add lots of music and/or apps, take care not to fill it up with photos too.



Back
Photos

FEATURED PHOTOS

Sync Featured Photos

Automatically add Featured Photos from iPhone to your Apple Watch.

ALBUM

Sync Album: Apple Watch

Photos Limit: 100 Photos

NOTIFICATION SETTINGS

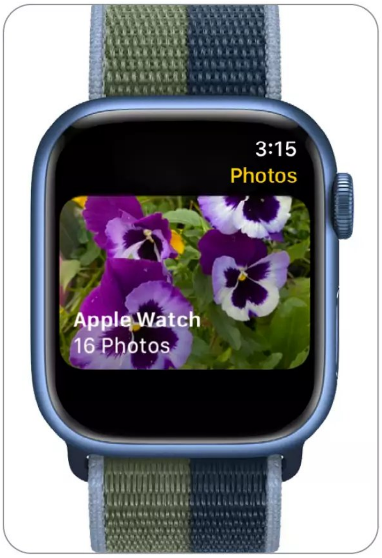
Mirror my iPhone

Custom ✓

Allow Notifications ✓

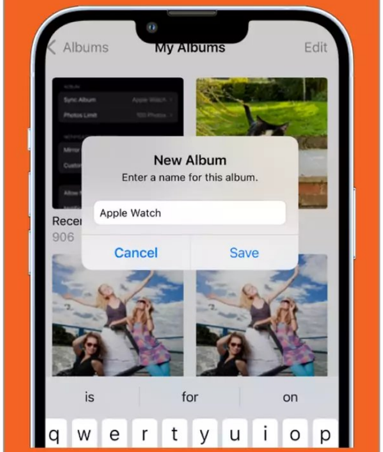
Notifications Off

4 At the foot of the page of My Watch > Photos, is an option to change the Notification Settings. By default it mirrors your iPhone. When the iPhone's app sends a notification, your watch does too. Alternatively, tap Custom and customise your Photos' notifications on your Apple Watch, to suit the way you use your watch.



5 Open the Photos app on your watch. You'll see collections that you can scroll up and down with the Digital Crown, or swipe up and down on the screen. These collections are Memory, Featured photos and the album you chose to sync. Of course, if you switched one of these syncs off on your iPhone, it won't be on your watch.

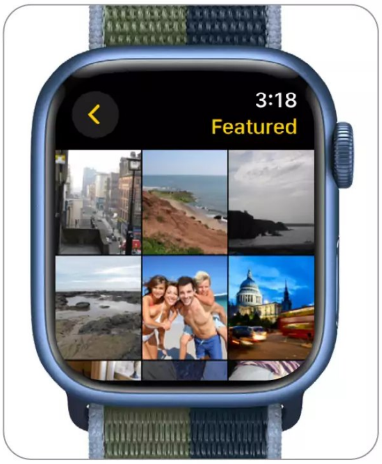
A Watch Album?



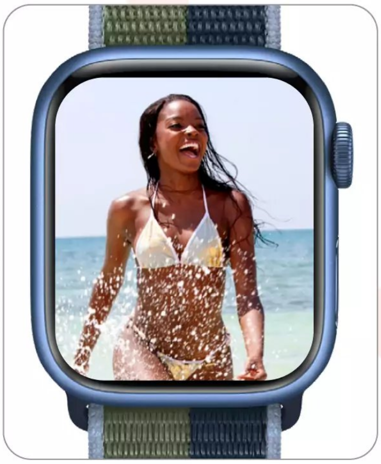
6 If you want to create an album for syncing with your watch, on your iPhone, open the Photos app and tap Albums at the bottom of the screen. Tap the plus icon (top left), make a new album, give it a name and then add the photos you want to sync. Pictures you add to the new album aren't deleted from existing albums; they're still there too.

Browsing Photos

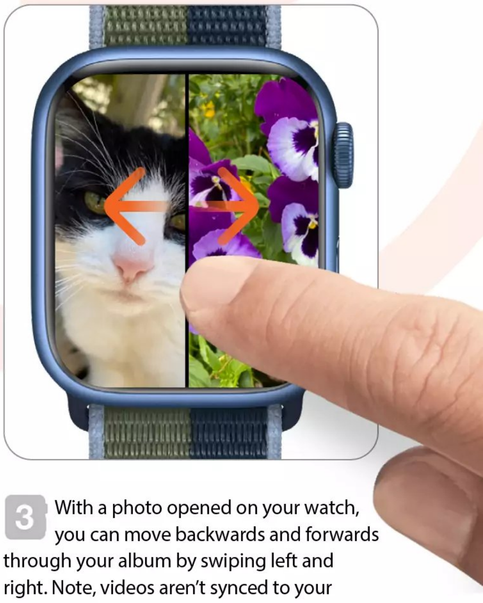
When you've synced photographs with your Apple Watch, you can enjoy them, right from your wrist. You can take a look at your family snaps without even getting your iPhone out of your pocket. It's simple and convenient.



1 In the Apple Watch's Photos app, tap the Featured collection or your synced album. You'll see your pictures in a large grid. You can scroll up and down this grid by swiping up and down with your finger.



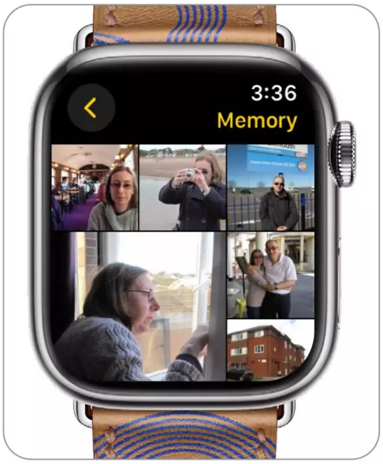
2 Tap on a photo in the grid to open it at full-size size. Scroll in and out of the picture using your Digital Crown. To get back to the grid, turn the Digital Crown until the picture shrinks back into it.

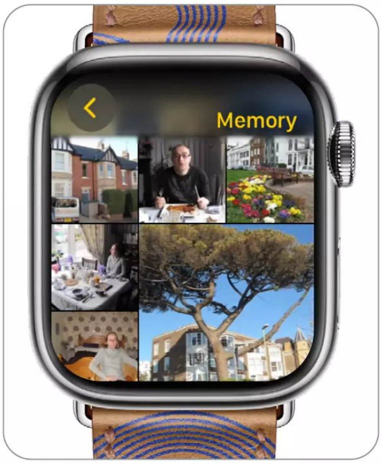


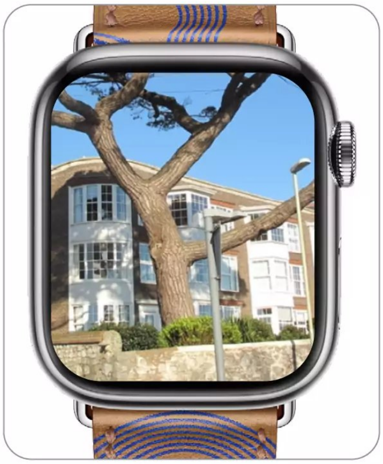
3 With a photo opened on your watch, you can move backwards and forwards through your album by swiping left and right. Note, videos aren't synced to your watch; they're ignored during syncing.

Browsing Memories

If you've chosen to sync Memories with your Apple Watch, on the front page of the watch's Photos app, you'll see a category called Memory. This works a little differently to other sections of the Apple Watch Photos app.







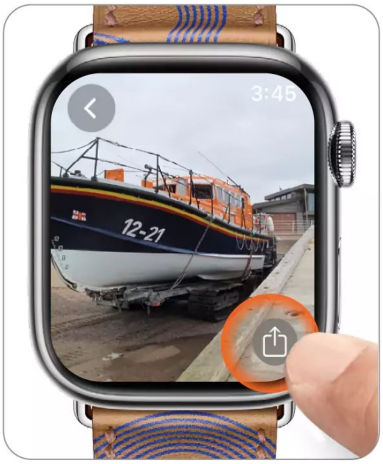
1 In your watch's Photos app, tap the Memory collection. Once again, it's displayed as a grid, but unlike the Featured and Album collections, the pictures are not the same size.

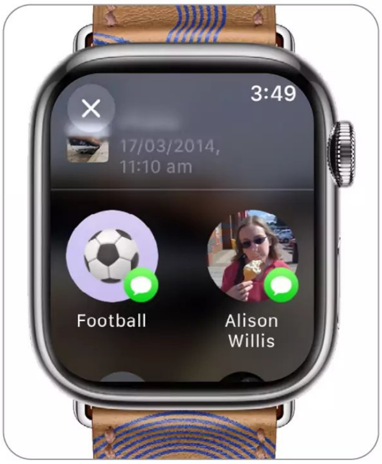
2 In contrast to the other photo categories in the Photos app, you can move up and down the grid using the Digital Crown, as well as by swiping up and down the screen with your finger.

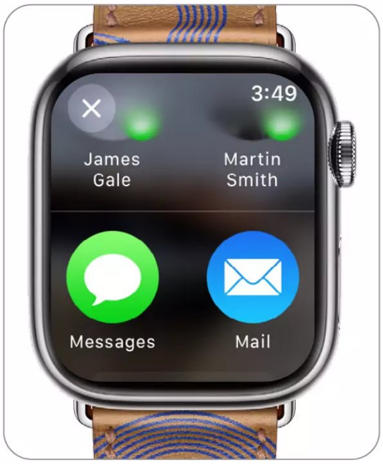
3 Open a picture by tapping it, then move in and out of the photograph by turning the Digital Crown. With the pic displayed larger than full screen, you can drag it around with your finger too.

Sharing Photos

With photos synced with your Apple Watch, you can share pictures with others, directly from your wrist. With just a few taps, you can send your friends your best photographs, so they can enjoy them too.







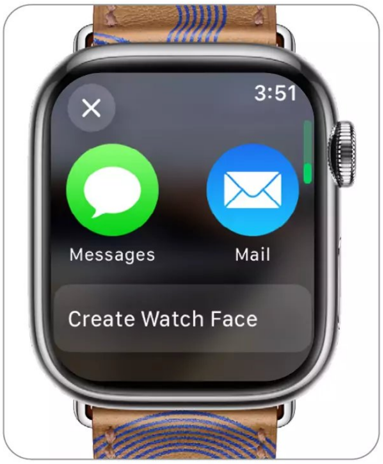
1 Navigate to the picture you want to share and tap it to open it to full screen size. If the time and controls aren't showing, tap the screen. Tap the sharing icon, bottom right.

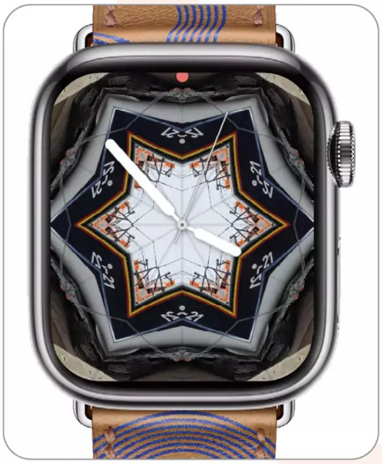
2 At the top of the next screen is a thumbnail of the photo, followed by ready-made options to share with people you regularly message. Tap one of these to send it to that person.

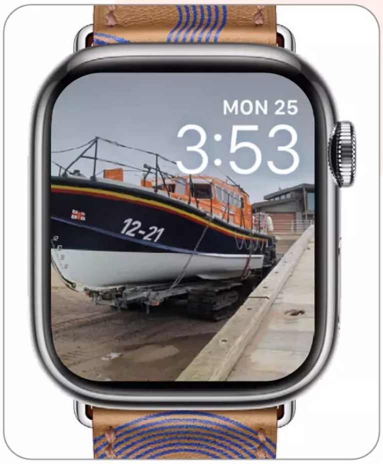
3 If the person, or sharing method, doesn't appear, scroll down to see options to mail or message the photo. Choose one, and fill in the recipient and the message, and send it.

Creating a Watch Face

You can create a watch face based on one of your photos, so you can see your favourite picture on your wrist along with a digital readout of the time. Here's how to do just that, on your trusty Apple Watch.





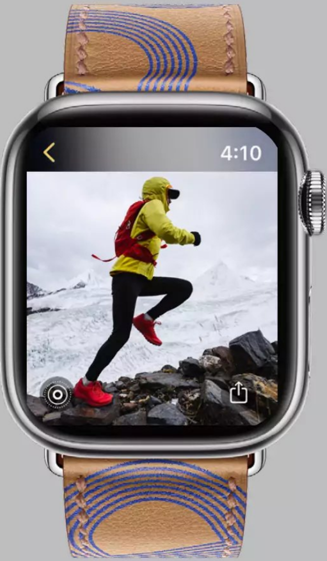


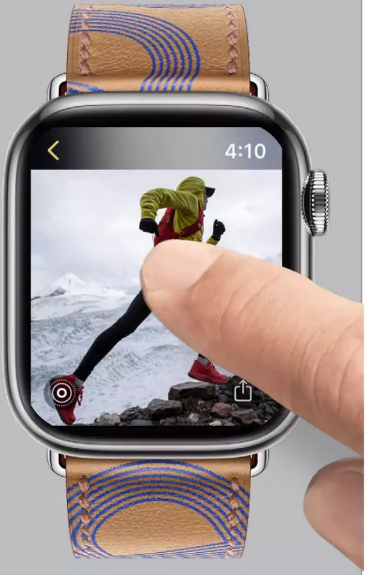
1 Choose a photo you want to use as a watch face and open it. Tap the Share icon in the bottom-right corner, and scroll with the Digital Crown until you get to the Create Watch Face button.

2 Tap Create Watch Face and choose whether you want a Kaleidoscope face or a regular Photo face. The former turns the photo into a kaleidoscope pattern on an analogue watch.

3 Opt for Photos and you get a full-screen photograph and a digital time readout. You can edit this watch face in the usual way, moving the digital time and adding complications.

Live Photos

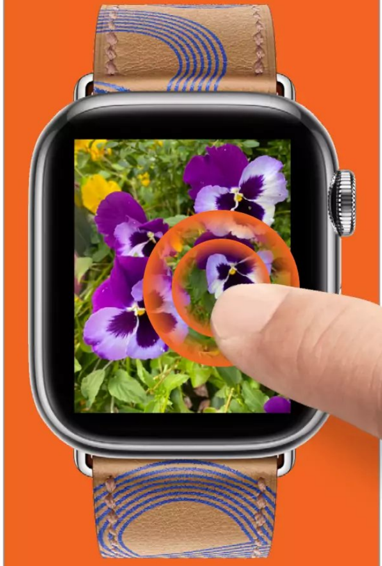




1 You know when you have a Live Photo on your Apple Watch, because when you tap it to show its top bar and icons, you see a Live Photo icon (concentric circles) in the bottom left.

2 To animate a Live Photo, tap and hold the screen, and you see the short video recorded with the picture. You can do this whether you have the icons visible on screen or not.

Resizing Photos



With a photo open on your Apple Watch, double tap the watch screen to toggle between viewing a picture that fills the entire screen, and a screen that shows the whole picture.

Here is the News

Apple News compiles important news stories and features from around the world and presents it to you in a single app. There's plenty of material here for free, but if you subscribe to Apple News+, you'll get access to hundreds of magazines and periodicals. The Apple Watch has a great News app, though it's not available in every region.

Scientists get closer to solving mystery of antimatter

The elusive substance holds the key to discovering how the Universe was formed.

1 To open the News app on your Apple Watch, press the Digital Crown, navigate to the News icon and tap it. As is usual, the icon for the app is the same as the iPhone's News icon.

2 Scroll with the Digital Crown for a short summary of a series of news stories. Tap one for the full story, which you can scroll up and down with the Digital Crown or your finger.

3 At the foot of the story are two icons; Bookmark to save the story for later, and the Share icon. To close the current story, simply tap on it and you can select your next story with the Digital Crown.

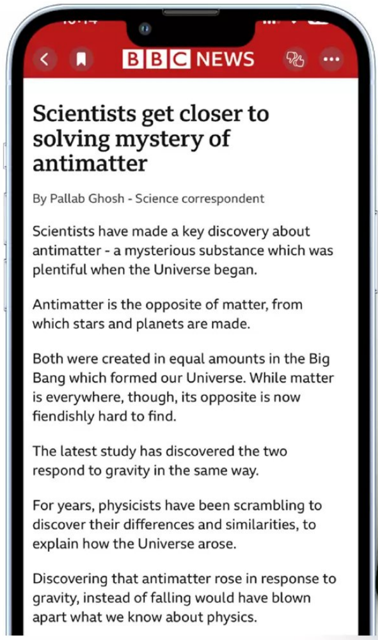
4 Using a news story's Share icon, you can share the story using Messages or Email. Tap a pin at the top of the options to share with the person in question, or scroll to the app icons below.



Scientists get closer to solving mystery of antimatter

By Pallab Ghosh - Science correspondent

Scientists have made a key discovery about antimatter - a mysterious substance which was plentiful when the Universe began.

Antimatter is the opposite of matter, from which stars and planets are made.

Both were created in equal amounts in the Big Bang which formed our Universe. While matter is everywhere, though, its opposite is now fiendishly hard to find.

The latest study has discovered the two respond to gravity in the same way.

For years, physicists have been scrambling to discover their differences and similarities, to explain how the Universe arose.

Discovering that antimatter rose in response to gravity, instead of falling would have blown apart what we know about physics.

5 To open a story you've Saved for Later on your iPhone, open the iPhone's News app and tap Following at the foot of the screen. Tap Saved Stories, and your story is there.

Hydrogen atom
Antihydrogen atom
Electron
Proton
Positron
Antiproton

What is antimatter?

Let's start with what matter is: Everything in our world is made from it, from tiny particles called atoms.

The simplest atom is hydrogen. It's what the Sun is mostly made from. A hydrogen atom is made up of a positively charged proton in the middle and negatively charged electron orbiting it.

With antimatter, the electric charges are the other way round.

Take antihydrogen, which is the antimatter version of hydrogen, used in the Cern experiments. It has a negatively charged proton (antiproton) in the middle and a positive version of the electron (positron) orbiting it.

A hydrogen atom is made up of a positively charged proton and negatively charged electron revolving round it

Antihydrogen is the opposite, a negatively charged antiproton in the middle and a positive positron around it.

7 On a Mac's News app, there's a sidebar on the left-hand side of the app, unless you closed it. Click the Sidebar icon to open it again. Tap Saved Stories and your story is there.

4 At the top of the stocks list is a three-dots icon found in the top right corner. Tap it and you can change the information on the stocks list to Price Change, Percentage Change or Market Cap.

5 At the foot of the stocks page there's a large '+' button. Tap it and enter the name of a company or its stock market abbreviation and you can add it to your list of displayed stocks.

6 When adding a stock, you might find there's more than one listed company with the same name; American, Japanese and European arms, for example. Tap the one you want to add.

Stopwatch, Alarm Timer and World Clock on Watch

On the iPhone, the Stopwatch, Alarm, Timer and World Clock features are covered in a single app: the Clock app. On the Apple Watch, they're four separate applications but as they're fairly straightforward, we'll deal with them all together here. They're easy to find. The timers and clocks are the orange icons found either side of the Watch Face app on your app switcher.

2 If you want to set a custom countdown timer, scroll to the top of the screen and tap the plus button. The three dials give you hours, minutes and seconds. Tap on one and move the Digital Crown to change it. When you've finished, tap Start and your countdown begins.

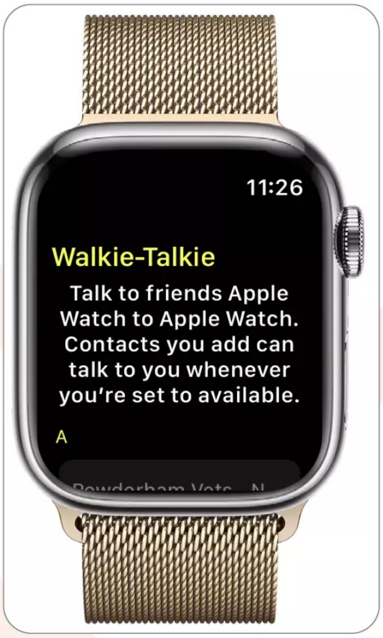
The Watch Walkie-Talkie

If you have an Apple Watch Series 1 or later, running watchOS 5.3 or later, you can make walkie-talkie calls right from your wrist. It works just like a physical walkie-talkie, where you must hold a Talk button while speaking, and release it while the other person presses Talk and speaks. The Walkie-Talkie app isn't available in some territories outside the US and UK.

11:31
James
James is talking

Setting Up Walkie-Talkie

Before you can use your Walkie-Talkie app on your Apple Watch, you have to set it up and invite a few friends to converse with you using this feature. Here's how to get started with the Apple Watch's Walkie-Talkie app.



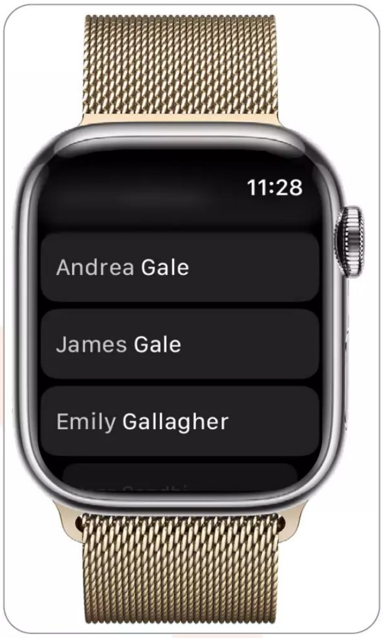
11:26

Walkie-Talkie

Talk to friends Apple Watch to Apple Watch. Contacts you add can talk to you whenever you're set to available.

A

1 Open Walkie-Talkie on your Apple Watch; it's a yellow icon with a black walkie-talkie on it. On the first screen, it explains that you need to add friends to the app before talking to them.



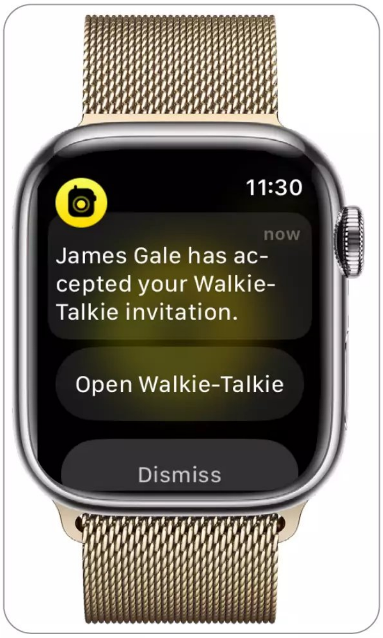
11:28

Andrea Gale

James Gale

Emily Gallagher

2 Scroll up the screen for a list of your contacts, drawn from the Contacts app. Find someone you wish to add, and tap their name. You're invited to turn on the Walkie-Talkie app.



11:30

now

James Gale has accepted your Walkie-Talkie invitation.

Open Walkie-Talkie

Dismiss

3 The people you add must accept your invitation. When they do, you can converse using the Apple Watch's Walkie-Talkie app, using the watch's built in mic and speakers.

Using Walkie-Talkie

When you're set up and have a few friends registered with Walkie-Talkie, you can make and receive two-way radio calls. It's not great for long conversations, but for a quick spoken message, it's great. And it's fun too!

You can add “first direct Credit Card - Visa” to your Apple Watch in the Apple Watch app.

Add Now

1 Open the Wallet app on your watch and you're invited to add a credit or debit card, or a travel card. If you've previously had cards stored on it, you can re-add them here too, or tap the three-dots icon to add a new one. You can add them on the watch, but it's easier to use your iPhone.

2 To add a new card, open your iPhone's Wallet app and tap Add. Choose whether to add a credit, debit or travel card, then tap Continue. Then use your iPhone's camera to take a photo of the card in question, keeping it in the frame. Alternatively, type the information in manually.

3 Tap Next, and you're asked for the security code from the back of the card. Agree to the T&Cs and you can add the card to your Apple Watch as well. Follow the on-screen instructions to complete. The first card you enter is the default payment card, but you can change this in Settings.

Using Apple Pay with Your Watch

If the store you're shopping in takes Apple Pay, making a payment from your Apple Watch is easy. For security reasons, you have to be wearing your watch, and it has to be unlocked with your passcode. Here's how it works.

1 To access your cards on your Apple Watch, first double-click the side button. Scroll through your cards with the digital crown, and when the one you want to use is showing, hold your watch near the contactless payment terminal. It vibrates to confirm payment.

2 Using Express Mode, you can use a card without double-tapping the side button first. To turn it on, tap a card, then tap the 'i' for information. Scroll down to Express Mode, tap it, then choose which card you want to use in Express Mode. Tap it, then confirm with your passcode.

3 You can review payments you've made on your cards using your iPhone or Apple Watch. On your phone, open the Wallet app, tap the card you want to check and it's displayed with recent transactions listed underneath. If they aren't, contact your bank for assistance.

1 If you add a loyalty card's iPhone app, it might support the Wallet app too, which lets you access the card alongside your payment cards. If it does, it will appear on your Watch.

2 In some territories, you can store travel cards in the Wallet app, so you can go through checkpoints without fishing around in your pockets. Unfortunately, it's not available in the UK.

3 If you buy a compatible ticket or pass online, it will appear in both your iPhone and Apple Watch's Wallet app. You can then use it just as you would a paper ticket.

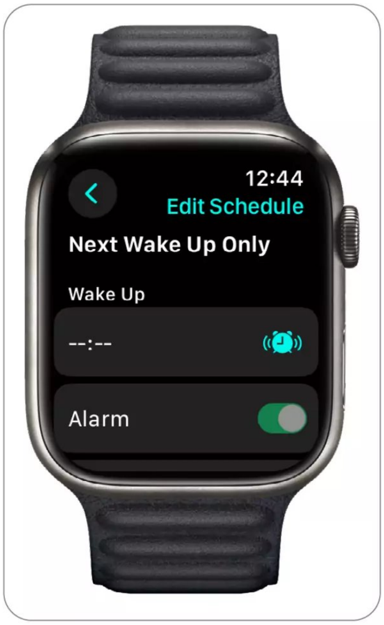
The Watch Sleep App

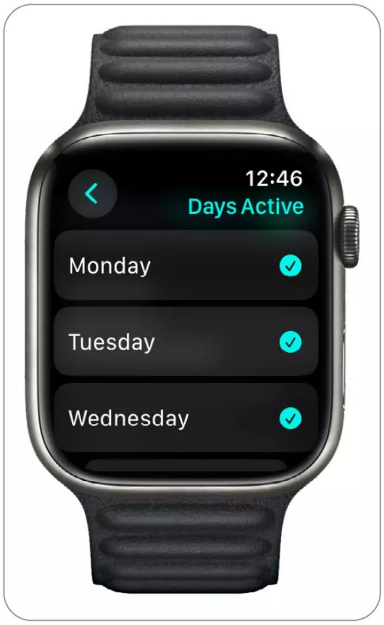
If you wear your Apple Watch in bed, you can use it to track your sleep, create bedtime schedules and make sure you meet your sleep goals. You can set up sleep goals on a per-day basis, so (for example), you can have a lie-in at the weekend, and still get up for work on weekdays. With our help, you can use the Sleep app to get a better night's sleep.

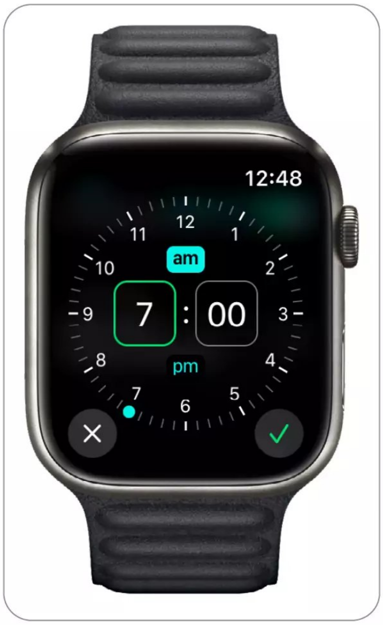
12:57
am
10 : 30
pm

Setting Up Sleep

Open the Sleep app on the Apple Watch; it's the blue icon with a bed on it. You can then set it up and use it to help you get a good night's sleep. You can even use Sleep Tracking to see how well you slept during the night.



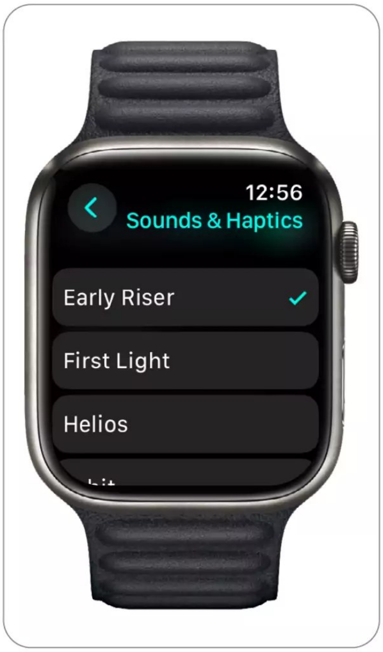




1 Open the Sleep app and tap the alarm icon. Scroll to Set Up Your First Schedule and set one up, configuring things like wake-up time, bedtime, sleep goal, sounds and haptics, alarms and more.

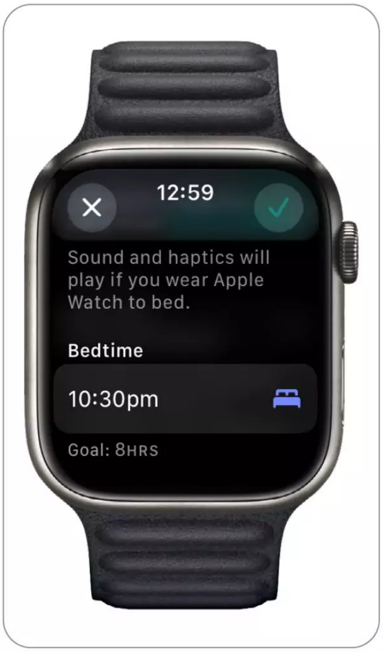
2 You can set up different schedules for different days of the week. Tap the Every Day button, and you're taken to a list of days, all ticked by default. Untick the ones you want to exclude from the schedule.

3 Tap the time listed under Wake Up and set a time at which you want to be woken. Tap the tick when done to go back to the previous screen, where you can switch the alarm on or off.



12:56
Sounds & Haptics
Early Riser ✓
First Light
Helios

4 Tap Sounds & Haptics, and you can choose an alarm sound to play, assuming you wear your watch in bed. Tap the options one by one to see what they sound like, then tick the one you settle on.

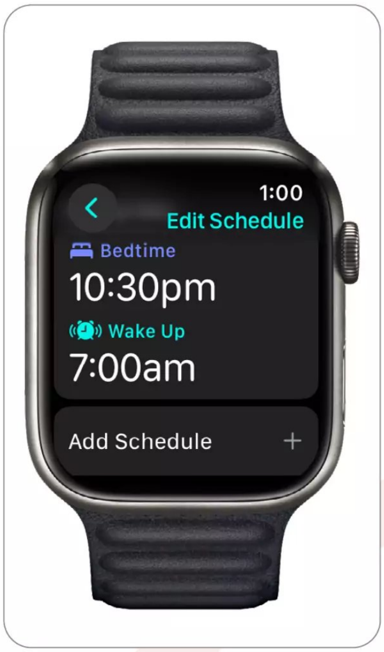


Sound and haptics will play if you wear Apple Watch to bed.

Bedtime 10:30pm

Goal: 8HRS

5 Finally, there's the Bedtime setting at the foot of the Bedtime settings page. Tap the currently stored time and set a time for when you want to go to bed. When you've finished, tap the tick icon.



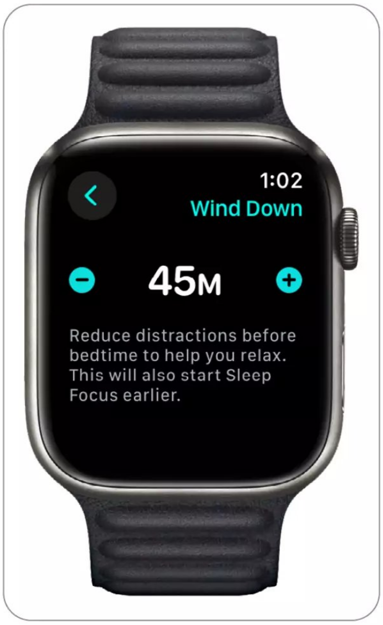
1:00
Edit Schedule

Bedtime 10:30pm

Wake Up 7:00am

Add Schedule +

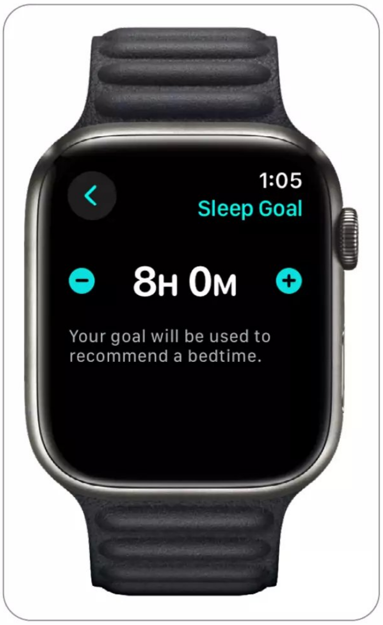
6 Your schedule is displayed. If you want to add another – maybe if you've set up a weekday one for work, and now want to add a weekend one – tap Add Schedule. Otherwise tap the chevron to go back.



1:02
Wind Down
45M

Reduce distractions before bedtime to help you relax. This will also start Sleep Focus earlier.

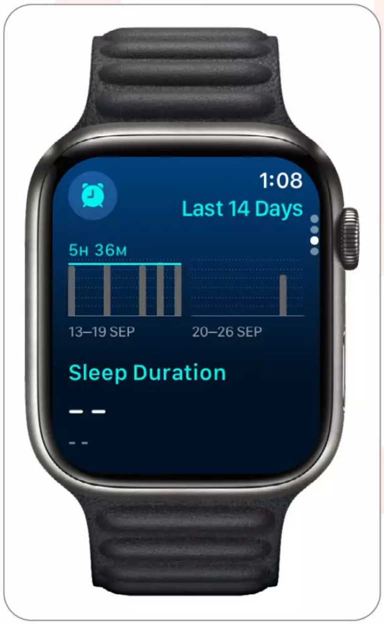
7 Set a wind-down time for you to relax and unwind for a specified period before you go to bed, to help you get to sleep more easily. Use the '+' and '-' buttons to set the length of time before bedtime activates.



1:05
Sleep Goal
8H 0M

Your goal will be used to recommend a bedtime.

8 You can also enable a feature called Sleep Goal, which sets the amount of time you wish to remain asleep at night. This goal is used by the Sleep app to recommend you a time to go to bed.



1:08

Things to do on Your Watch

What do you do with your Apple Watch? Obviously, you use it to tell the time, but what else? Sports and fitness? We have that covered, with an extensive guide to the Apple Watch's training tools. To keep an eye on your health and wellbeing? We tell you all about the Apple Watch's health features, such as measuring your heart rate or blood oxygen. Did you know you can use Apple Watch to take photographs with your iPhone? Or record voice memos, and listen to them later? Or unlock your Mac or iPhone using your Apple Watch? It's all in this section.

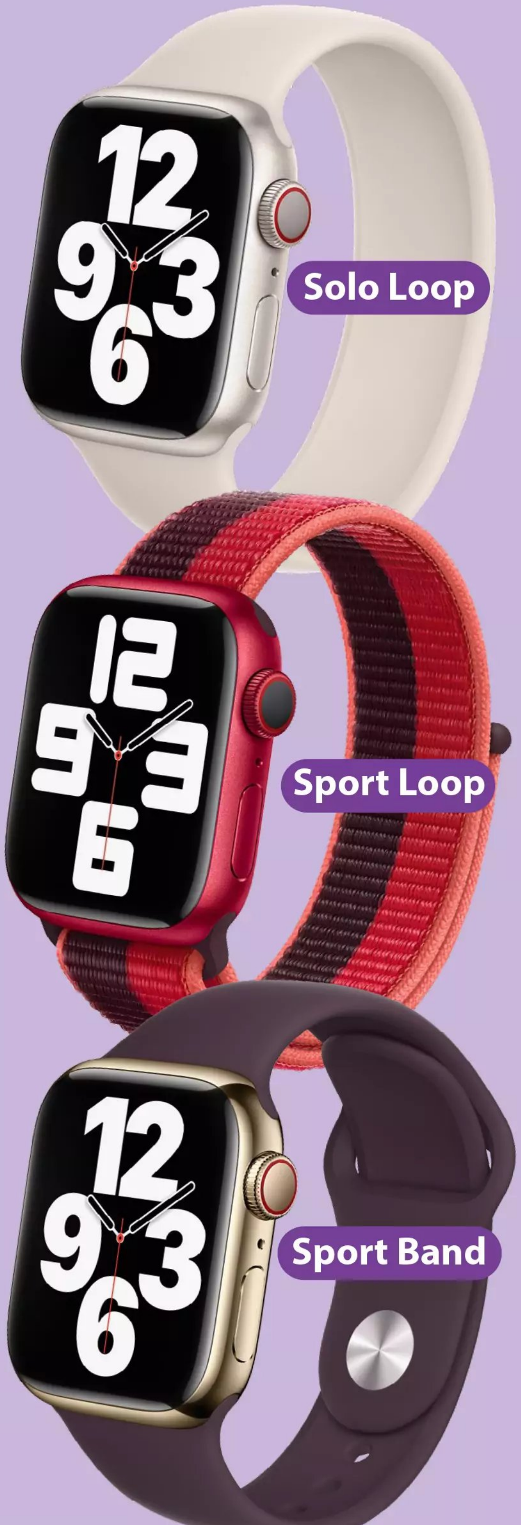
Sports Straps

There are several straps available for the Apple Watch that are designed with sports in mind. Made from high-performance fluoroelastomer, the Sport Band fastens with a pin-and-tuck system that keeps the loose end of the band in place so there's nothing to get caught in your workout gear. It's soft, comfortable and sweat-proof, so it's ideal for the gym.

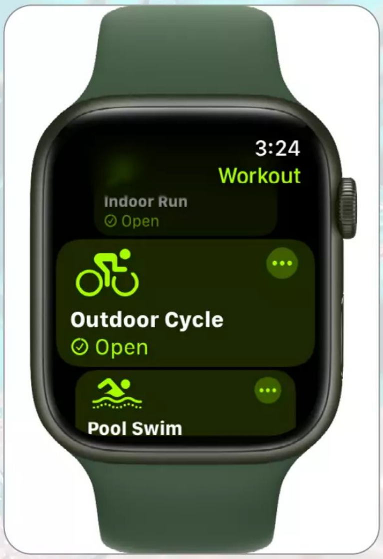
The Solo Loop is similar to the Sport Band, but it has no clasp or buckle. Made from liquid silicone rubber, it's a single-piece strap that stretches over your wrist. Comfortable and secure, it's both swim-proof and sweat-proof. If you prefer a fabric band, there's the Sport Loop. Its hook-and-loop fastener is easy to adjust, and the double-layer nylon weave allows your skin to breathe and moisture to escape. You can even get a Nike-branded Sport Loop.

If you bought an Apple Watch with a non-sports strap such as the Milanese Loop or the Link Bracelet, it's a good idea to buy a more sporty strap for your workouts.



The Workout App

The latest release of watchOS brings us some new workouts, especially for cyclists and hikers. You can connect Apple Watch to Bluetooth devices for cycling, so more information can be recorded.



3:24

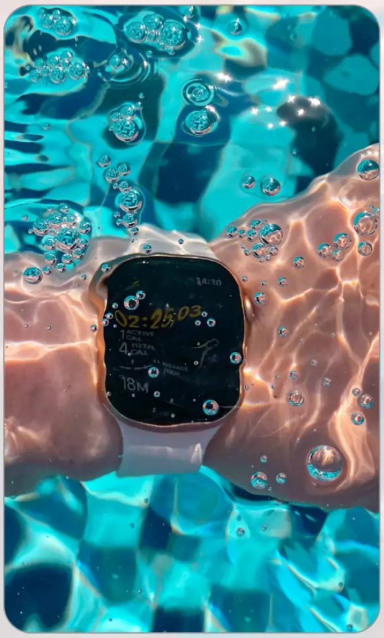
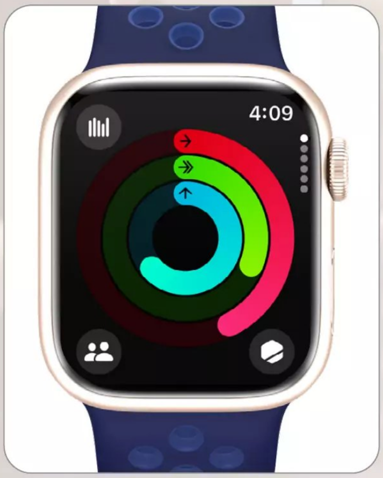
10 If you want to check your workouts after the event, on your iPhone, open the Fitness app. Your workouts are listed here. Tap one and you'll see the details of what you achieved.



11 If you swim wearing your Apple Watch (Series 2 or later), the screen automatically locks when you start the workout. Turning the digital crown when you've finished expels water from the speaker.

Tracking Your Activity

The Activity app helps you make sure that every day you stay active, take enough exercise and don't spend too much time sitting down. You can set it up as a watch face Complication too. Here's how to use the Activity app.



1 In the Activity app, part-completed circles represent your Move, Exercise and Stand scores. The circles are gradually completed throughout the day. When a circle is completed you've met that target. You might notice that if you use Activity as a Complication on your watch face, the lines in the watch face also update according to how active you've been that day.

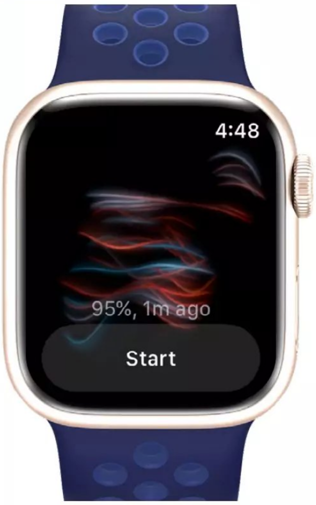
It's possible to change the Activity app's distance measurements between km and miles, but doing so is not very intuitive. On the iPhone, open the Health app and go to Summary > Walking + Running Distance. Scroll to the bottom of the page and tap 'Unit'. You can then change which unit of measurement your Apple Watch uses.

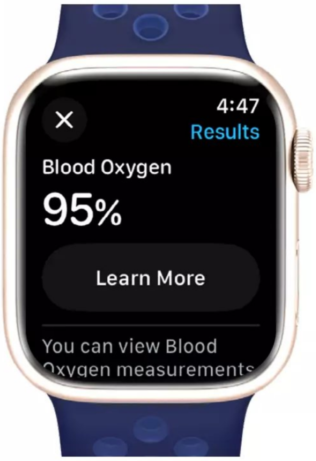
More Sports and Fitness Tips

There's more. If you're interested in getting – or staying – fit and active, the Apple Watch has even more to offer. Let's take a look at some of its further features in the sporting and keep-fit sectors.

Blood Oxygen



1 It's a good idea to keep an eye on your blood oxygen level. This measures the percentage of oxygen your red blood cells carry from your lungs to the rest of your body. Open the Blood Oxygen app to see the last automatic reading.



2 To do a new reading, tap Start and remain still during the 15-second countdown. Your reading is shown; it should be between 95 and 100 percent. On the reading screen, tap the 'i' icon to learn more about blood oxygen.

Fitness+ is a total fitness programme that's available as a subscription, and is built around your Apple Watch. You can view a workout on an iPhone, iPad or Apple TV, following the instructor's directions. The service incorporates workout metrics from your watch as you go. A range of workouts are on offer, all led by specialist trainers. You can subscribe to Apple Fitness+ for £9.99/$9.99/9,99 € a month or £79.99/$79.99/79,99 € a year.

Peripheral Vision

There are numerous peripherals on offer for the Apple Watch, many of which have sports and fitness in mind. Twelve South's ActionBand, for example, is a pair of sweat bands with space for the Apple Watch built into the left-hand band. The Quad Lock Bike Mount Kit for your iPhone is available from Apple, and holds your smartphone securely to your bike. And if you're concerned about scratching or banging your watch as you exercise, there are plenty of protective cases available.

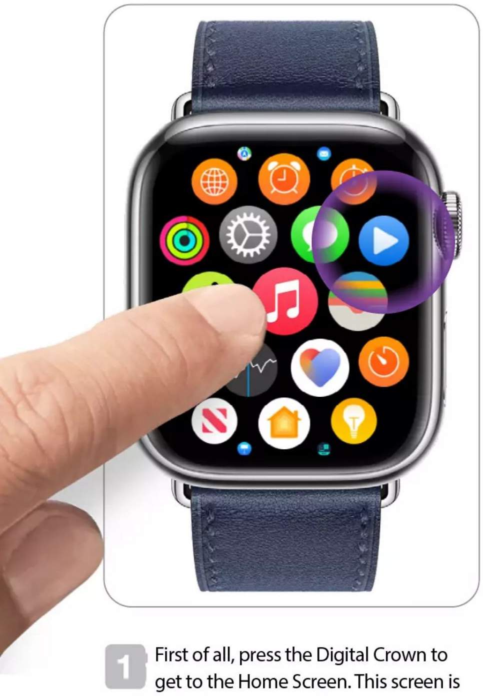
Remote on Watch

12:01
Remote
Ian Osborne's Library
tv
Living Room

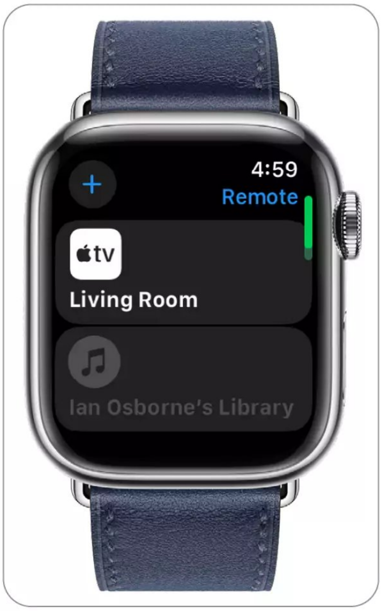
With the Remote app, you can use your Apple Watch as a controller for iTunes or your Apple TV. After pairing your Apple Watch with your Mac or PC, you can use the remote to play music from your computer or pair it with your Apple TV to control your viewing. Just the thing if you can't find your remotes when you're comfortably settled on the sofa.

The TV Remote

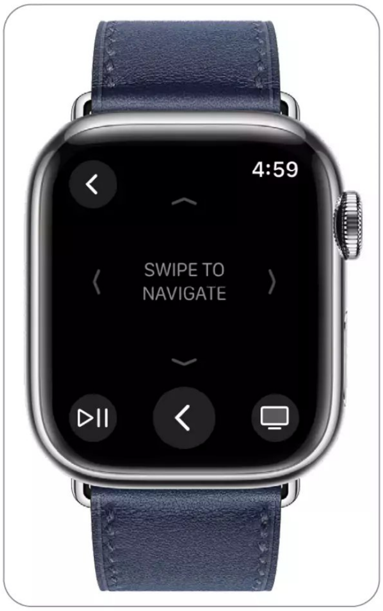
Before you can use your Apple Watch as a controller for an Apple TV, you must pair the two devices. Here we show you how to do this, and also how to use the watch's Remote app to control your Apple TV.



1 First of all, press the Digital Crown to get to the Home Screen. This screen is offered in a Grid View by default (as shown here), but you might have switched to a List View. Either way, tap the Remote app, the blue one with a white Play icon on it.



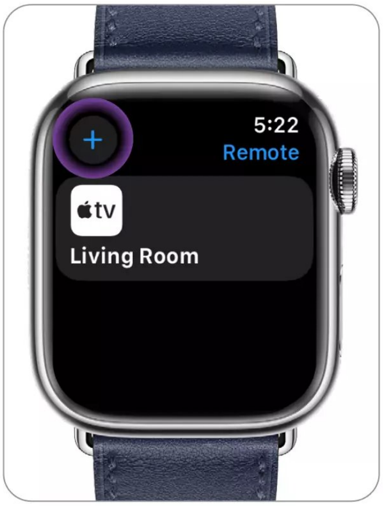
2 Switch on your Apple TV. Both your Apple TV and Apple Watch must be on the same Wi-Fi network, and your watch's Walkie-Talkie app should be off; use the Control Centre to do this. Your Apple TV appears on your watch's Remote app, then tap it.



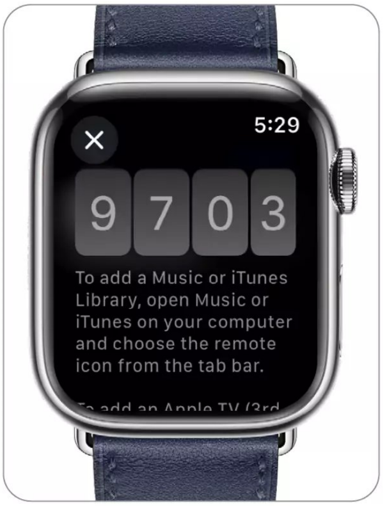
3 You can now use your watch screen to swipe left, right, up and down just like you do with your Apple TV handheld remote. The chevron in the bottom-left works like the remote's Menu button, and the icon in the bottom-right is the Home button.

The Music Remote

Note: For this tutorial to work, the computer running the Music app and your Apple Watch must be on the same Wi-Fi network. Naturally if you're at home and on your household Wi-Fi network, this won't be a problem.

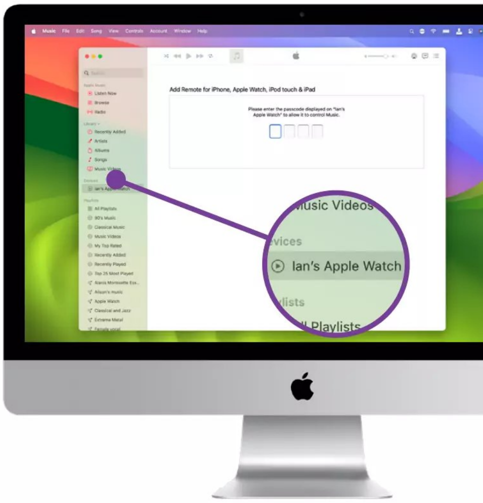


1 Open the Remote app on your Apple Watch; it's the blue icon with the white right-pointing triangle on it. It looks for connected devices. There's a plus icon in the top-left corner. Tap it to begin adding a new device to your Apple Watch Remote app.



To add a Music or iTunes Library, open Music or iTunes on your computer and choose the remote icon from the tab bar.

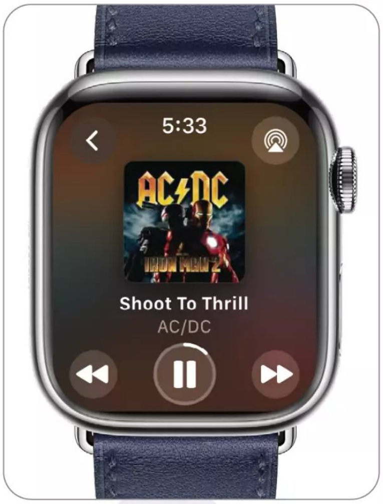
2 You're immediately given a four-digit passcode, which you're going to need soon, and an instruction to open the Music app on your Mac or PC. If you haven't done so already, do this now, so you can register your Apple Watch with your library.



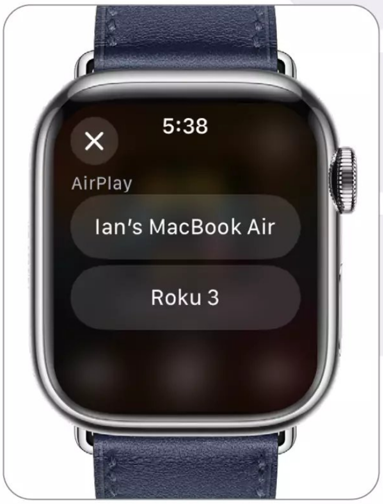
Add Remote for iPhone, Apple Watch, iPod touch & iPad

Please enter the passcode displayed on "Ian's Apple Watch" to allow it to control Music.

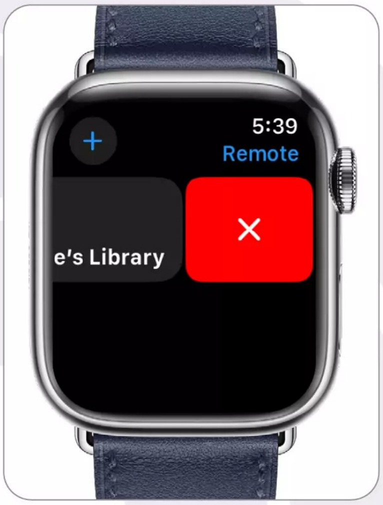
3 In the Music app on your Mac or PC, look for your Apple Watch in the sidebar, listed under Devices. Click on it to be taken to a screen where you can enter the number you obtained in the previous step. Do so to register your Apple Watch with Music.



4 To delete a library from your Apple Watch, in the Remote app, find the library you want to delete and swipe it to the right. A red button marked with an X is revealed. Tap the X and the library is removed. You can add it again later if you want to do so.



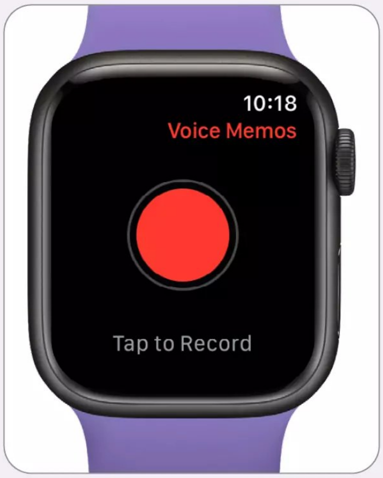
5 The icon in the centre plays and pauses the current song, the ones either side of it skip forwards and backwards and the digital crown controls the volume. The icon in the top right lets you switch the sound output from your computer's speakers to an AirPlay device.



6 To delete a library from your Apple Watch, in the Remote app navigate to the screen showing the list of libraries. Tap and hold the one you want to delete, and when they wobble, tap its 'X', then tap Remove to delete the library. Tap the tick to stop the wobble.

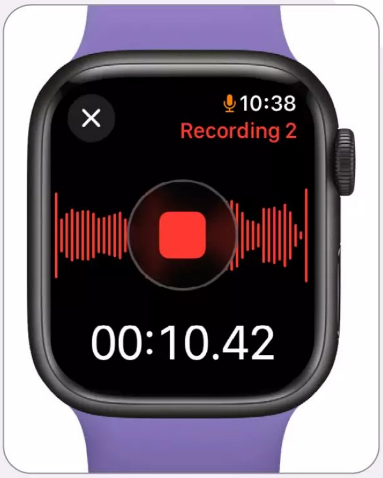
Record Voice Memos

With an Apple Watch on your wrist, you can record short pieces of audio, quickly and easily, using the Voice Memos app. Here's how this handy app works.



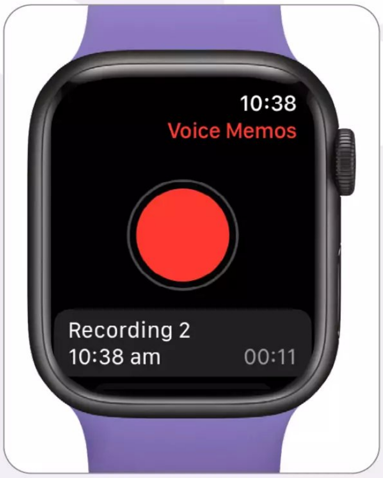
10:18
Voice Memos
Tap to Record

1 Open the Voice Memos app on your Apple Watch; it's the icon showing the red and white wave form. You'll see a simple screen, with a large red button in the centre labelled, 'Tap to record'.



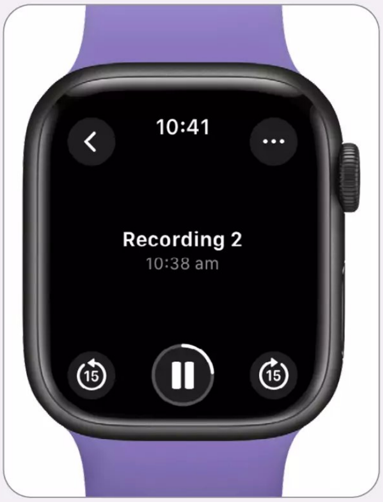
10:38
Recording 2
00:10.42

2 Tap the big red button, and if you're recording a voice memo, speak your message. Naturally, you can record other things too; just make sure the watch is close enough to the sound source.



10:38
Voice Memos
Recording 2
10:38 am
00:11

3 While recording, the circular red button turns into a square. When you've finished and you want to stop the recording, tap the square button and it ends. The recording is listed on the screen.



10:41

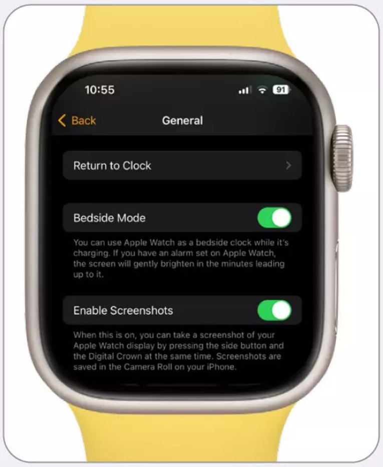
6 Recordings are synced with your iPhone, iPad and/or Mac, as long as they're signed into the same Apple ID. Just open the device's Voice Memos app and you can review it there too.

Take Screenshots on Your Watch

Did you know you can take screenshots of your Apple Watch face? Of course you did – you're reading a magazine that's full of them. But do you know how to do it? It's a useful tip; you can take a screenshot and send it to a friend, maybe to show them how to do something on their own Apple Watch, or share an alert you received. Here's how to take screenshots on your watch.



10:55
Back
General
Return to Clock

Bedside Mode

You can use Apple Watch as a bedside clock while it's charging. If you have an alarm set on Apple Watch, the screen will gently brighten in the minutes leading up to it.

Enable Screenshots

When this is on, you can take a screenshot of your Apple Watch display by pressing the side button and the Digital Crown at the same time. Screenshots are saved in the Camera Roll on your iPhone.

1 In your iPhone's Watch app, go to My Watch > General and make sure Enable Screenshots is turned on. You can then take a screenshot on your Apple Watch by pressing the Digital Crown and Side Button together.

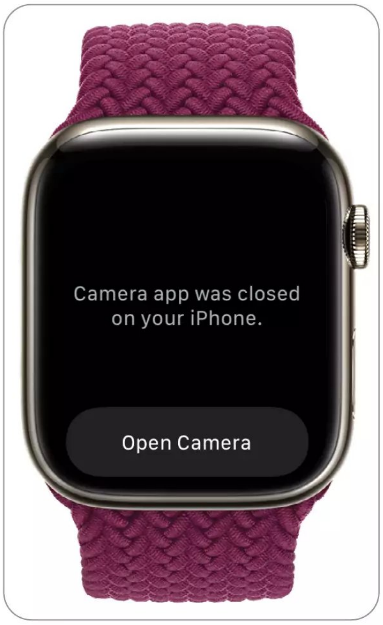
Watch Camera Remote

Although your Apple Watch has no built-in camera of its own, you can use it to take photographs through your iPhone's cameras. Just open the Apple Watch Camera Remote app and you can use its built-in controls to snap whatever's shown on your iPhone's Camera app. Here's how to use this handy feature.

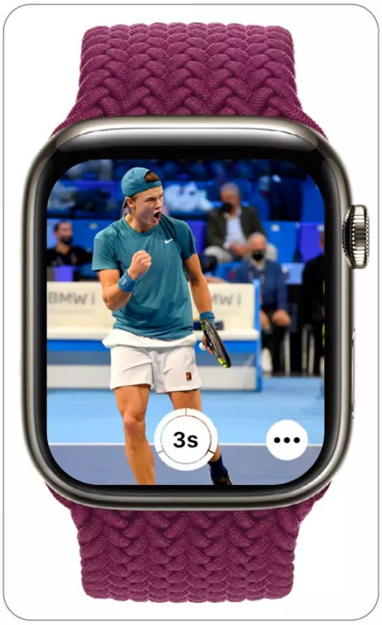
iPhone
12:53
Ace of Spades
Motörhead—Ace

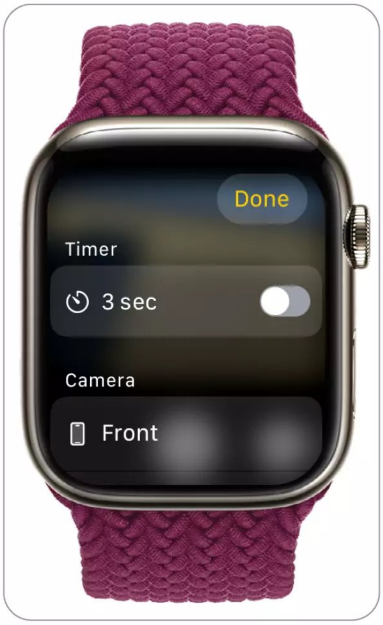
Take Photos with the Camera Remote App

The Camera Remote app on Apple Watch is the grey icon with a picture of a camera shown. It looks a lot like the Camera app icon on your iPhone, so you can't miss it. It's a very app useful, if a little basic.



Camera app was closed on your iPhone.



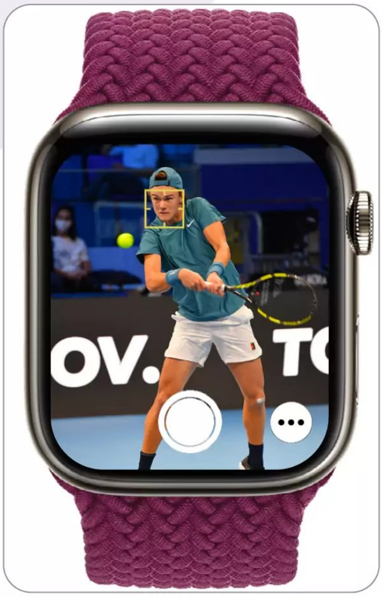


Timer
3 sec
Camera
Front

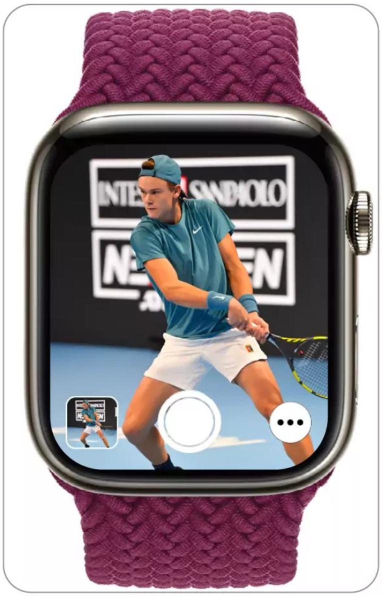
1 First of all, open the Camera app on your iPhone and the Camera Remote app on your Apple Watch. If you open the watch app without first opening the iPhone application, you see the screen shown above – press the button marked 'Open Camera' to launch the iPhone app.

2 This is what you'll see when the Camera and Camera Remote apps are both open. Whatever is viewed through your iPhone's Camera app is shown on your watch screen. You can position the iPhone a distance away from the watch, as long as it's within Bluetooth range.

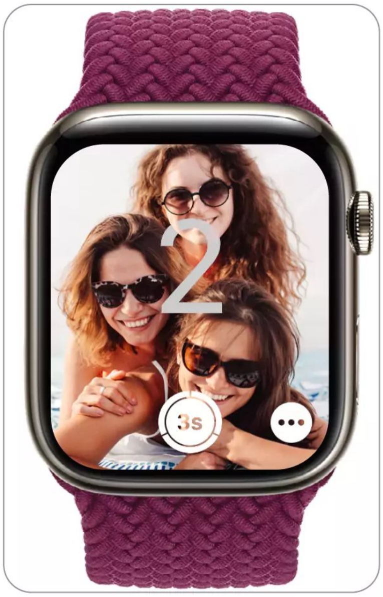
3 Tap the three-dots icon on the bottom-right of the watch screen to configure your iPhone camera options. These include the timer, which camera to use, the flash, Live photo settings and switching the HDR option on or off. Tap Done when you've finished.



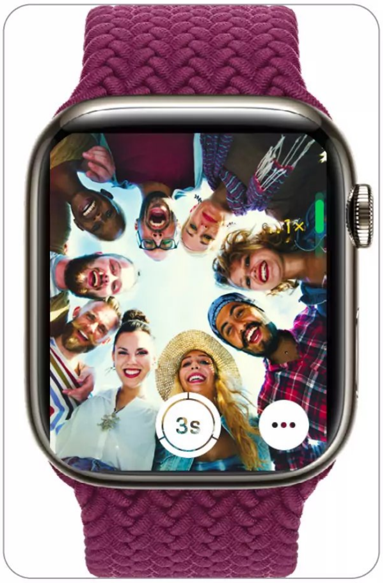
4 To set the focus on your picture tap the screen, just like you would when using the iPhone's Camera app. A yellow square shows where you're focused. If it's not where you wanted it, tap again to set a different focus point. This keeps the important things sharp.



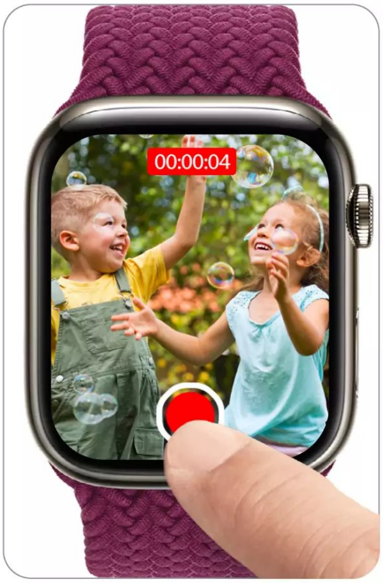
5 To take a photo, tap the big white button. A picture is taken, and shown as a thumbnail in the bottom-left corner. Tap this thumbnail to look at the pictures and swipe the screen to cycle through them. Tap Close (top-left), to go back to the Camera Remote.



6 If you want to use the timer, tap the three-dots icon and switch it on. The white button now shows '3s'. Tap it and after a three second countdown, a burst of pics are taken, giving you a choice of snaps. If you're taking a selfie, the timer gives you a chance to move.



7 While setting up a shot on the Camera Remote on your Apple Watch, you can use the Digital Crown to zoom in and out. A line appears at the side of the screen to show you how much you're zoomed. After setting the zoom, tap the white button to take the photo.



8 You can also use the Camera Remote button to take videos using your Apple Watch. Instead of tapping the white button, tap and hold it instead and it turns into a video button and movie footage is captured. To stop recording the video, release the button.

Spycam

If you need to keep an eye on something, you can use your iPhone and Apple Watch as a spycam. Place the phone where you need it, and open Camera Remote on your watch. As long as you're in Bluetooth range, you can view and photograph what's going on from your watch.

Health and Wellbeing

The Apple Watch is great for monitoring your health and looking after your general wellbeing. You can check your heart rate, make sure ambient noise levels aren't damaging your hearing, guard against nasty falls and more. Here we round up the watch's best health and wellbeing features.

Manage app and service access to your Health data and see which devices have

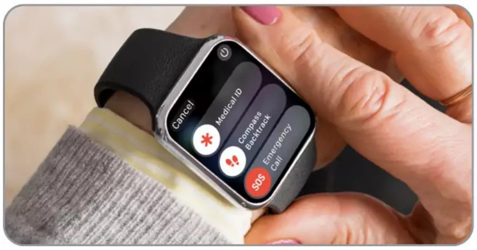
1 In the Settings app, open the Health option. Under Health Data, there's a range of categories such as Activity, Hearing and Heart. Tap one and you can review data such as headphone audio levels, how fast you climb the stairs and more.

2 Health Details collates information like your name, age, sex, blood type and more. Tap the Medical ID option for similar information, but also the chance to edit it. Scroll to the bottom of the screen and tap the Edit Medical ID button.

3 At the foot of the Health settings are sources of data. These include health-related apps which you've installed and linked with your iPhone's Health app, and devices you've paired with your iPhone which record health information.

In Emergencies

Press and hold the Side Button for three emergency options. Swipe the Emergency SOS slider (or continue to hold the Side Button) to call the emergency services. If your watch doesn't have cellular services, your iPhone must be nearby. After the call, the watch sends your emergency contacts your location. Swipe the Medical ID slider to see your medical information. Compass Backtrack uses the Compass app to take you to the last location from where you could call the emergency services. All these features work even if your watch is locked.



Handwashing

Apple Watch has a Handwashing feature that helps you make sure you've washed for long enough. Open the Settings app and scroll down to the Handwashing option. Turn on the Handwashing timer and when the watch detects that your washing your hands, it starts a 20-second timer. Further down this page is another switch labelled Handwashing Reminders. If you turn this on, your watch detects when you've returned home and reminds you to wash your hands if you haven't done so within a minute or two of arriving.

12:27
Handwashing
Handwashing Timer
Apple Watch can detect when you're washing your hands and start a 20-second timer.

Editing Your Medical ID

It's a good idea to add as much information as possible to your Medical ID. In the event of an accident, the emergency services could find this data invaluable. You can do this on your iPhone or Apple Watch.

mother	Barbara Osborne

add emergency contact

1 To edit your Medical ID on your Apple Watch, open the Settings app, tap the Health option and then tap Medical ID. Scroll all the way to the bottom of the page, and tap the Edit Medical ID button found there.

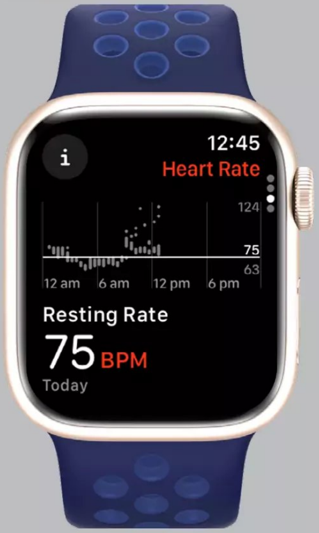
2 Tap an option in your Medical ID, and then you can edit it. Tap Add Emergency Contact and you can add someone from your Contacts app. Scroll up and down with the Digital Crown, then tap a contact to add them.

3 On your iPhone, open the Health app and tap your icon in the top-right corner. On the next page, tap Medical ID and then Edit, top-right corner. You can then add information, including Emergency Contacts.

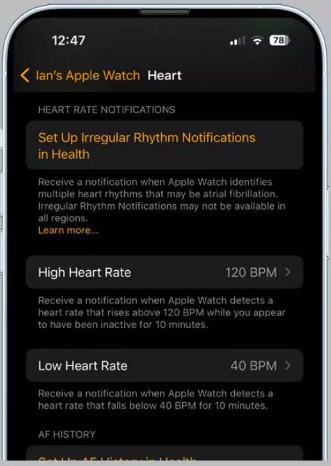
Check Your Heart

There's a trio of health apps on your Apple Watch that let you keep a check on your heart and blood: Heart Rate, ECG and Blood O_2. Here we show you how to how to access and use these useful applications.

Heart Rate



1 Open the Heart Rate app, and wait until it measures your heart rate. You're shown your current, resting and walking heart rate. Tap the 'i' icon to see more details on these measurements, taken over time.



HEART RATE NOTIFICATIONS

Set Up Irregular Rhythm Notifications in Health

Receive a notification when Apple Watch identifies multiple heart rhythms that may be atrial fibrillation. Irregular Rhythm Notifications may not be available in all regions.
Learn more...

High Heart Rate 120 BPM

Receive a notification when Apple Watch detects a heart rate that rises above 120 BPM while you appear to have been inactive for 10 minutes.

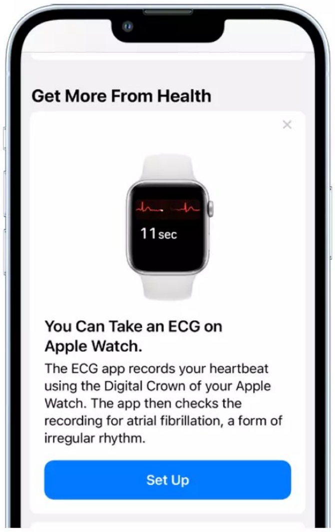
Low Heart Rate 40 BPM

Receive a notification when Apple Watch detects a heart rate that falls below 40 BPM for 10 minutes.

AF HISTORY

2 On your iPhone, open Apple Watch > My Watch > Heart. Under Heart Rate Notifications, you can set a high and low heart rate and have the app send you an alert if these figures are exceeded for ten minutes.

ECG

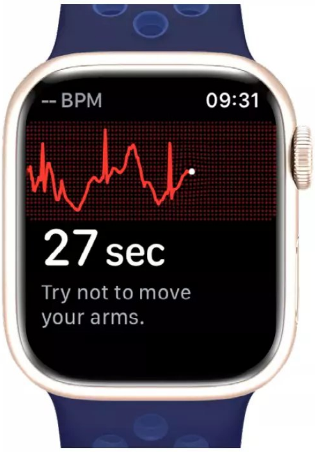


Get More From Health

You Can Take an ECG on Apple Watch.

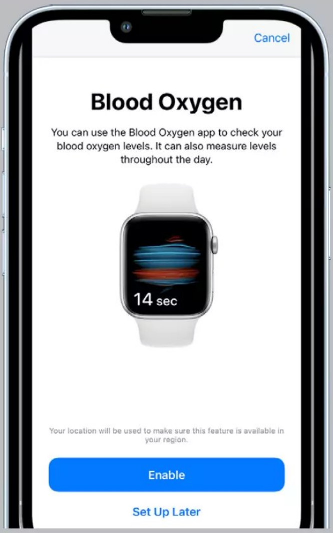
The ECG app records your heartbeat using the Digital Crown of your Apple Watch. The app then checks the recording for atrial fibrillation, a form of irregular rhythm.

1 You can take an electrocardiogram (ECG) on your Apple Watch. First open Health on your iPhone, and under the Summary tab, scroll down to the section on ECGs. Tap Set Up, and follow the on-screen instructions.



2 When set-up is complete, open the ECG app on your watch, and hold your finger on the Digital Crown for 30 seconds without pressing it. Your ECG is recorded, and its results are available on your watch and iPhone.

Blood O_2



Blood Oxygen

You can use the Blood Oxygen app to check your blood oxygen levels. It can also measure levels throughout the day.

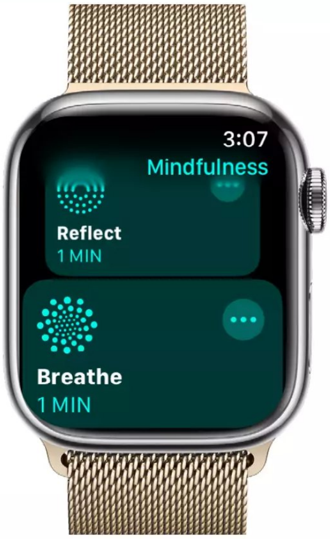
Your location will be used to make sure this feature is available in your region.

1 Apple Watch Series 6 and 7 can measure blood oxygen levels. On your iPhone, go to Health > Browse tab > Respiratory > Blood Oxygen, and tap Enable. Follow the on-screen instructions to set it up.

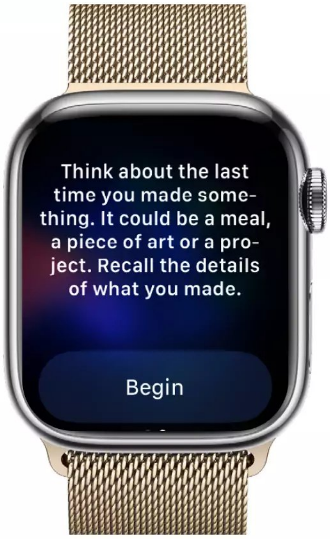
2 On your watch, open the Blood O_2 app and tap Start. Keep your wrist straight while the timer counts down from 15 seconds. You're then given your blood oxygen rating. You can review your readings in the iPhone's Health app.

Mindfulness

The Mindfulness app gives you the chance to 'focus, connect and centre as you breathe'. Here's how to make the most of it.



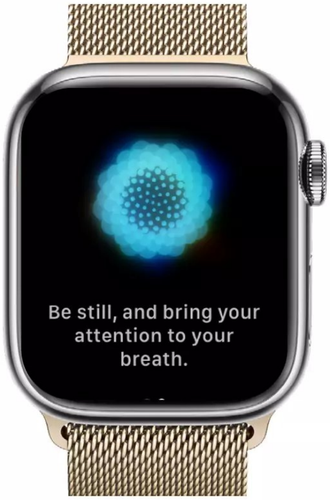
3:07
Mindfulness
Reflect
1 MIN
Breathe
1 MIN



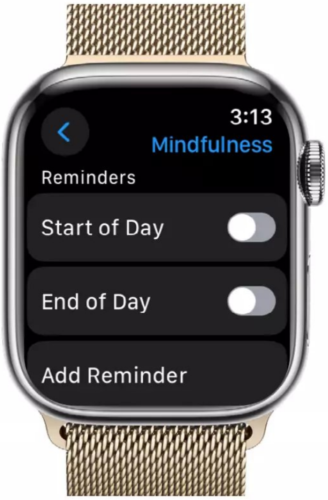
Think about the last time you made something. It could be a meal, a piece of art or a project. Recall the details of what you made.

1 Open the app and you're offered three options; State of Mind, Reflect and Breathe. Tap the three-dots icon next to Reflect or Breathe to read tips on using the feature. Tap Duration at the top of these tips to change how long it takes.

2 Choose the Reflect option, and it gives you something to think about before showing a beautiful pattern on the screen. If you want to end the session before the set duration is met, swipe right and tap End.



Be still, and bring your attention to your breath.

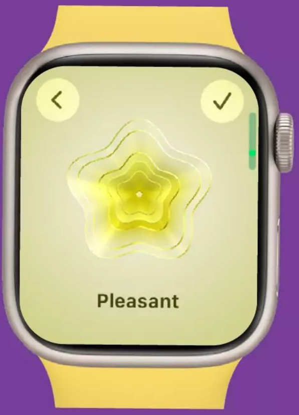


3:13
Mindfulness
Reminders
Start of Day ○
End of Day ○
Add Reminder

3 Choose the Breathe option and focus your breathing in time with the pattern on the screen as it grows and shrinks. Again, swipe right and tap End to finish early. If you use the Breathe watch face, tap it to start a session.

4 Go to Settings > Mindfulness to set up reminders, get a notification of your weekly summary, mute these reminders for a day and more. With Apple Fitness+, you can listen to guided Meditations on Apple Watch.

State of Mind



Pleasant

Introduced with watchOS 10, the State of Mind feature lets you log your moods. Choose whether to add a feeling for today or right now, then scroll through the emotions with the Digital Crown. Tap the tick to record your current mood.

Vision Health

Looking after your eyesight is very important, especially for the young. The International Myopia Institute recommends children spend at least 80-120 minutes outside during daylight hours. You can use the Apple Watch's ambient light sensor to record time spent outside, and review the information on an iPhone or iPad. In the iPhone's Health app, go to Browse > Mental Wellbeing > Time in Daylight to see how much time you're spending in daylight. If you find yourself outside during the day without your Apple Watch, you can tap Add Data (top right) and add the time spent outdoors manually.

About Time In Daylight

Time in Daylight is an estimate of the amount of time spent in sunlight. For children, spending 80–120 minutes outside each day can help lower the risk of myopia or short-sightedness. For adults, spending around 20 minutes outdoors every day has numerous physical and mental health benefits.

Cycle Tracking

The Cycle Tracking app is designed to help people who menstruate to log detains of their menstrual cycle, identifying on which days they were menstruating, how heavy the flow and whether they suffered symptoms associated with menstrual and pre-menstrual conditions such as headaches and cramps. When the app has been used for a few months, it can predict the start of the next period, and when the person's next fertile window is about to start. Using the app is simple enough – just open it on your Apple Watch and follow the on-screen instructions to add data. Tap Options and you can turn individual options on and off, such as Period Predictions, Fertility Predictions, and Heart Rate Data.

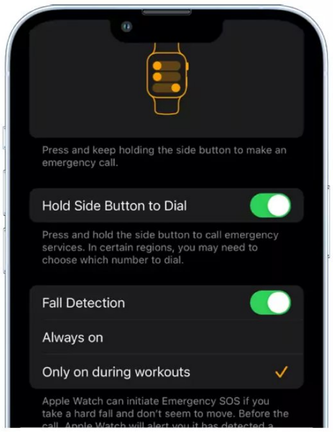
10:09
It looks like you've taken a hard fall.
SOS EMERGENCY SOS
I'm OK
mergency SOS calls

Using Fall Detection

If you own an Apple Watch SE or Apple Watch Series 4 or later, it can detect if you've taken a nasty tumble. A haptic gives you a little buzz on the wrist, an alarm sounds and a message on the watch face asks if you want to call the emergency services. If you do, swipe the Emergency SOS switch. If not, tap the 'I'm OK' button. Should you remain immobile after a fall for around a minute, a 30-second countdown begins, during which it buzzes your wrist and an alert sounds, which increases in volume. Tap Cancel to stop the countdown. If you don't, your Apple Watch automatically calls the emergency services and messages your emergency contacts (from your Medical ID), with your location. Falls are recorded in your Health app on your iPhone, unless you tap the option saying you didn't fall after all (a false positive).

Turning Fall Detection On and Off



Press and keep holding the side button to make an emergency call.

Hold Side Button to Dial ●

Press and hold the side button to call emergency services. In certain regions, you may need to choose which number to dial.

Fall Detection ●

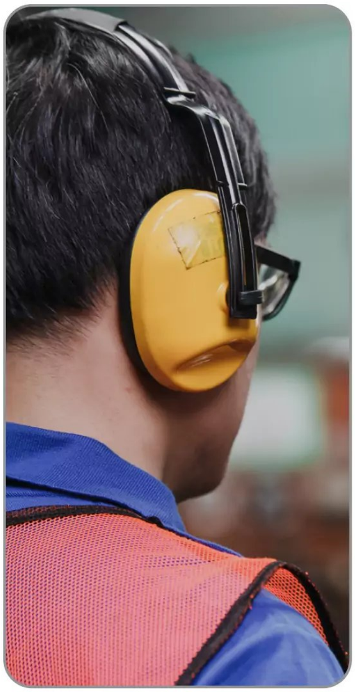
Only on during workouts ✓

Apple Watch can initiate Emergency SOS if you take a hard fall and don't seem to move. Before the

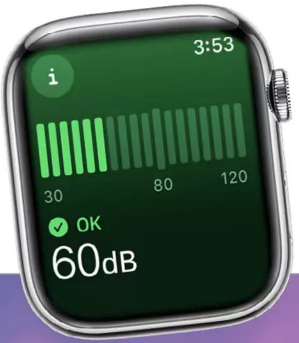
To turn off Fall Detection, on your iPhone, open the Watch app and tap the My Watch tab. Scroll down the page to the Emergency SOS section and tap it. Tap the Fall Detection switch to turn it on and off, and with it on, decide whether it should always be on or only during workouts.

Too Loud?



The Noise App

If you're worried your environment is too noisy and it might damage your hearing, open the Noise app on your Apple Watch. The first time you do it, the environmental sound measurements are off; tap the Open Settings button and then the Environmental Sound Measurements option. On the next screen, tap the switch marked Measure Sounds to turn on the service. With the Environmental Sound Measurements option on, when you open the Noise App it shows you how loud the ambient sounds are in your current whereabouts, and whether this should be a matter for concern. Scroll up and tap Learn More, for information on decibel levels and their potential for damaging your hearing.



✓ OK
60dB

Threshold Notifications

You can have the Apple Watch give you notifications if environmental noise reaches a certain level. Open the Settings app and tap the Noise option. You can turn off the feature again by tapping Environmental Sound Measurements and tapping the Measure Sounds switch. Alternatively, if you tap the Noise Notifications option, you can set how loud the sound has to be before you get a notification. Choose from turning notifications off altogether, or have them set at a noise level between 80 and 100 decibels. On this screen, you're also shown how long you can safely spend in an environment where the sound reaches these levels.

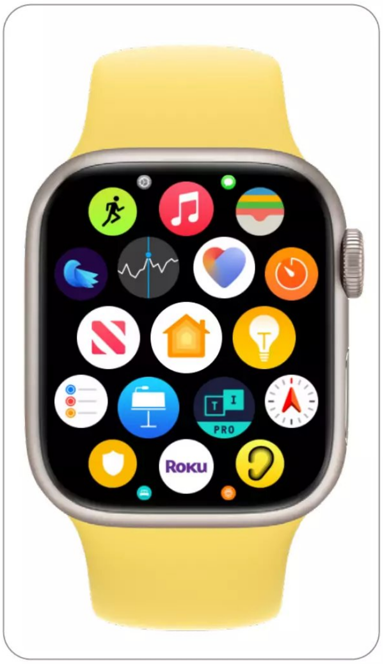
Controlling Home Gadgets

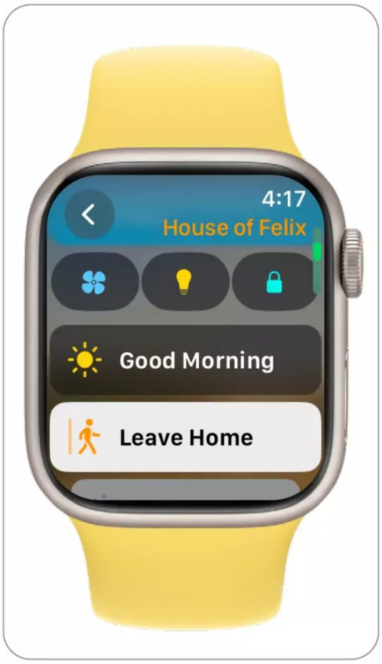
On your iPhone, the Home app can help you control your various HomeKit-compatible smart home gadgets, such as cameras, lights, locks, thermostats and more. The Home app has an Apple Watch app too, so you can control these things directly from your wrist, as soon as you've set up your home on your iPhone.

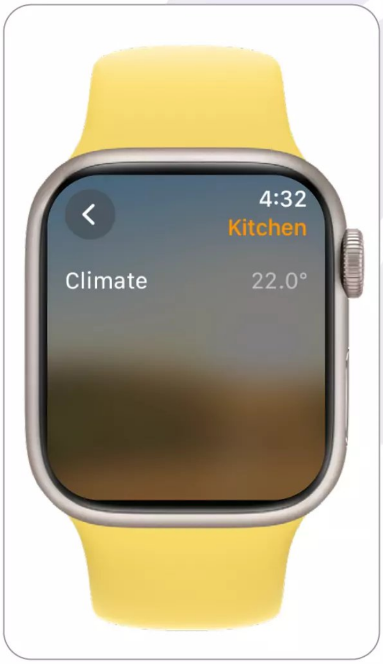
4:44
Scenes
Good Morning
Leave Home
Approach Loft

Gleaning Information

Apple Watch's Home app gives quick and easy access to your HomeKit devices, but not all controls can be used on the watch. It also learns from what you do and brings the most-used devices to the fore.







1 Open the Home app on your Apple Watch. It's not hard to find. The icon is exactly the same as the Home app on your iPhone; an orange house on a white background as seen here.

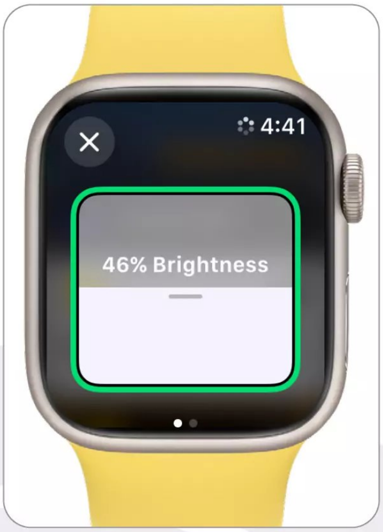
2 These buttons are categories of Home gadgets. In this case they're Climate, Lights and Cameras. Tap one for a list of gadgets in that particular category you've set up.

3 Tap the Climate button and any HomeKit-enabled sensors you have installed give you information such as temperature, humidity and more. What info is given depends on the sensor in question.

Using HomeKit Devices

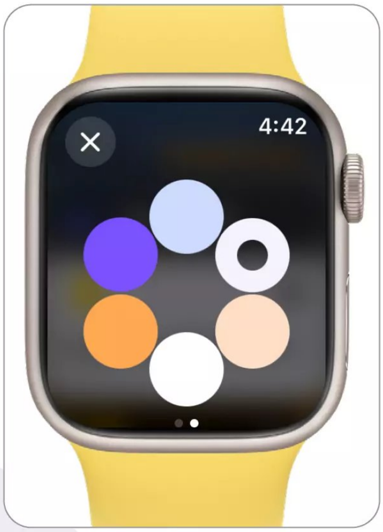
How you use the Home app on your Apple Watch greatly depends on what individual devices you have set up. Here's a short guide to some individual appliances and how they work.

Lights – Brightness



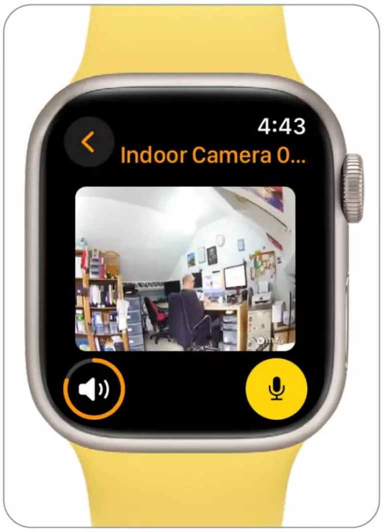
Tap the light in the Home app to turn it on and off. To change the brightness on a HomeKit smart light, tap the three-dots icon and scroll the Digital Crown.

Lights – Colour



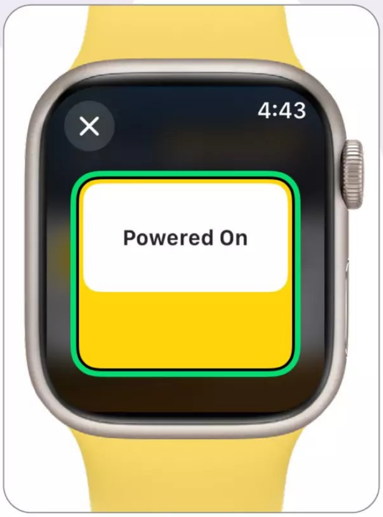
If the lights in question can change colour, tap the three-dots icon, swipe the screen left and then tap the colour you wish to use. Colours may vary.

Cameras



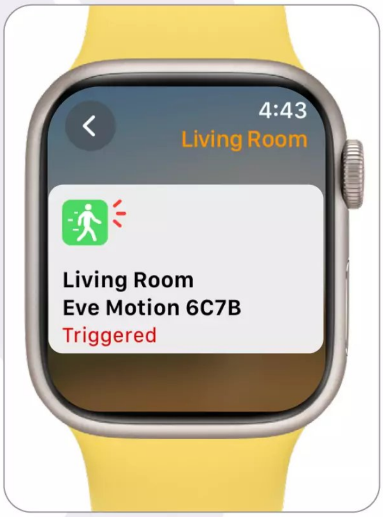
With a HomeKit camera, your Home app might (depending on the camera), let you zoom in and out or change the volume with the Digital Crown.

Smart Plug



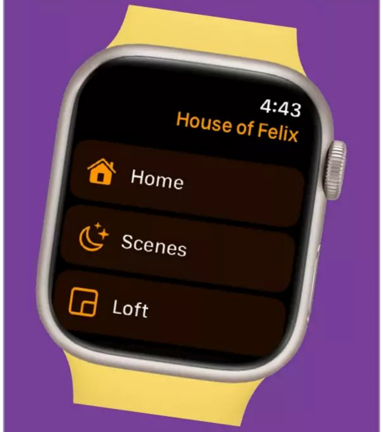
You can control a smart plug from your watch by tapping it on the Home app's opening screen, or tapping the three-dots icon and using the Digital Crown.

Motion Sensor



Registering a motion sensor with your Home app gives you an alert when motion is detected. Just the thing for keeping an eye on the house when you're away.

Rooms & Categories



Open the Home app and scroll up, past your home page gadgets. You'll see categories such as Cameras and Favourites, and designated rooms such as Kitchen and Living Room. Tap these to see all the HomeKit devices that fall into these categories; whether they're presented at the top of your list or not.

Unlock Your Mac with Watch

If your Mac is recent enough, it's possible to unlock it using your Apple Watch. If your Mac has gone to sleep, it senses when you – and your watch – are nearby and automatically awakens. You can also use your watch rather than typing your administrator password. You still need your password after restarting your Mac, though.

Unlocked by this
Apple Watch

1 To unlock your Mac with your watch you can use any model of Apple Watch, as long as it's running watchOS 3 or later. Your Mac must be running macOS Sierra or later, and be reasonably new. On your Mac, open System Preferences > Security & Privacy and click General.

2 Under 'Use Apple Watch to unlock apps and your Mac', check the box next to your current Apple Watch. If it isn't there, your Mac's too old. Your iPhone and Apple Watch must be nearby and unlocked. Enter your Mac's password when asked, and wait until the feature is switched on.

3 From now on, when your Mac is asleep and you approach it with your Apple Watch unlocked and on your wrist, it wakes up. Your watch vibrates and you get a message. To turn this feature off, go back to System Preferences > Security & Privacy > General and uncheck the box.

Unlock Your iPhone with Watch

Face ID is a great iPhone feature, but if your face is covered, maybe by a covid mask, it simply won't work. That's where unlocking your iPhone with your Apple Watch comes in. You'll need an Apple Watch Series 3 or later, running watchOS 7.4 or later, paired with an iPhone with Face ID (iPhone X or later), running iOS 14.5 or later. Here's how to do it.

Third-Party Apps on Watch

Your Apple Watch is not limited to the range of apps that come with the operating system. You can also use the App Store to download and install even more apps. There are apps for almost anything you can imagine, such as gaming, fitness, weather, getting things done and more. In this section, we show you how to download and install new apps, and cover some of the best third party software available for your Apple Watch. Look out for tutorials on Nike Training Club, Just Press Record, Things, Shazam, What3words, OneFootball and more.

Automatic App Install ●

When this is on and you have apps on your iPhone that also work with Apple Watch, those apps will automatically install and appear on your Home Screen.

Watch Orientation Left Wrist

1 If you have apps on your iPhone that have a companion app on your Apple Watch, but haven't downloaded and installed the watch version, open your iPhone's Watch app and tap My Watch at the foot of the screen.

2 On this screen, scroll all the way down to the bottom. Here you'll see a list of apps on your Phone that you can also use on your watch. Tap the Install button next to one to download and install it on your Apple Watch.

3 Go to Watch > My Watch > General. There's a switch marked Automatic App Install – it's on by default. With it on, watch companion apps are automatically installed on your Apple Watch when you install their iPhone apps.

Nike Training Club

According to Nike, the Nike Training Club app is 'one of the smartest training tools available'. It's free, and it packs in more than 180 workouts, covering a range of physical exercises designed to build strength, mobility, endurance and more. The app now has a great Apple Watch component too.

4 The Show More button gives you dates further into the future, so you can postpone it for a long while. The Clear button (found only on the screen accessed with the blue arrow), cancels the to-do without marking it as done.

5 To add a new to-do to your Things app, tap the blue plus sign in the top-right corner of the first screen, the one listing your tasks. Again, you can use the virtual keyboard (if your watch is new enough), dictation or Scribble to title it.

6 The to-do is added to your Things Inbox, but if you tap the 'Added to Inbox' message before it disappears, it's moved to your Today section instead. You can also use Siri to add to-dos; press and hold the digital crown and speak it.

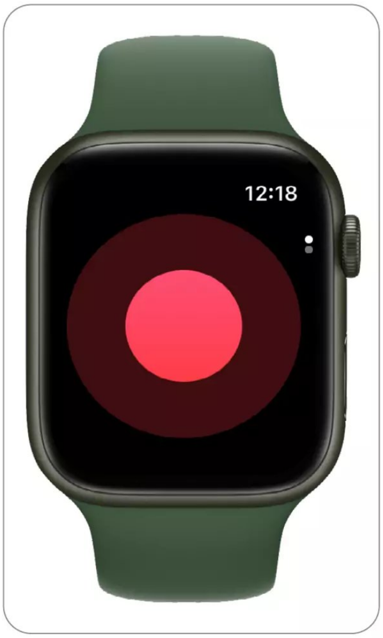
The Just Press Record App

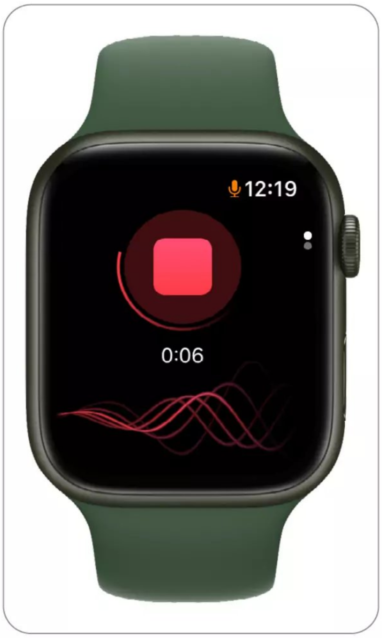
There are numerous reasons why you'd want to make a quick audio recording. Maybe there's been an accident and you want to record a conversation as evidence. Perhaps you want to record an announcement for later review. Or you might want to make a voice memo so you don't forget something. Just Press Record is ideal.

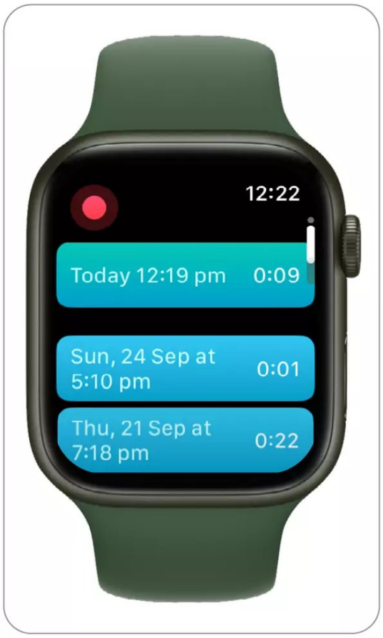
Recents
17:04
Today 17:00
8 seconds

Making Recordings

With Just Press Record, you don't have to reach into your pocket and get your iPhone to make a recording. Instead, you can start recording using your Apple Watch, which is much more convenient and discreet.







1 On your Apple Watch, launch the Just Press Record app. You'll see a big red circular button. This is the record button. Tap it to begin making an audio recording from your Apple Watch, which can be played back later.

2 While the recording is active, the circular button becomes a square with a red line orbiting it. A wave form at the bottom of the screen reacts to incoming audio, and the length of the recording is shown in the top-left corner.

3 Tap the red square to stop recording and return to the screen with the red circle button. Tap it to start a new recording, or swipe left to get to this screen, which lists your recordings. Tap one to get to a screen where you can play it.

You can add a Just Press Record complication to your Apple Watch face, as seen here in the bottom-left corner of the screen. Tap it and the Just Press Record Apple Watch app opens and automatically starts a new recording.

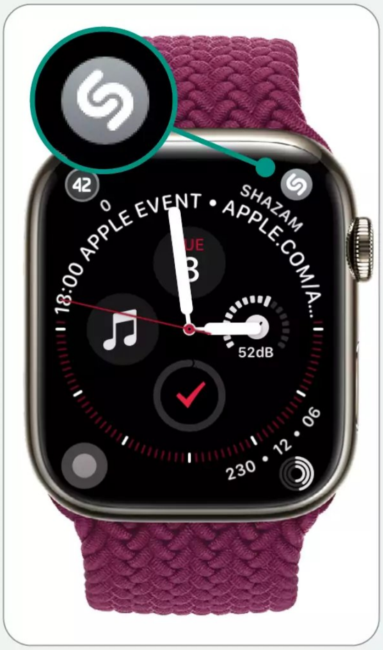
Identify Music with Shazam

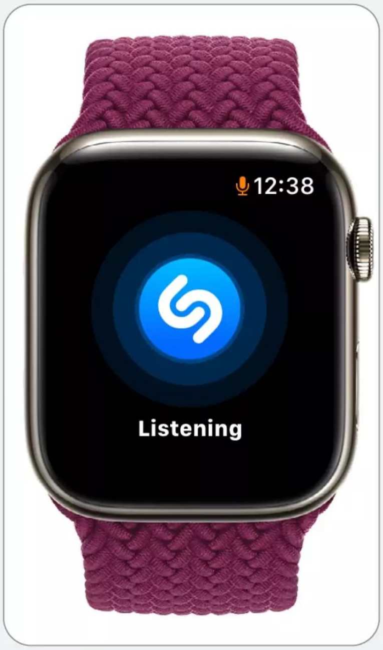
It's annoying, but inevitable. You know the song they're playing on the radio, the soundtrack behind the action scene in the latest movie or the bouncy tune that accompanies the advert, but you can't think of the title or artist. With Shazam, you can find out, right from your Apple Watch.

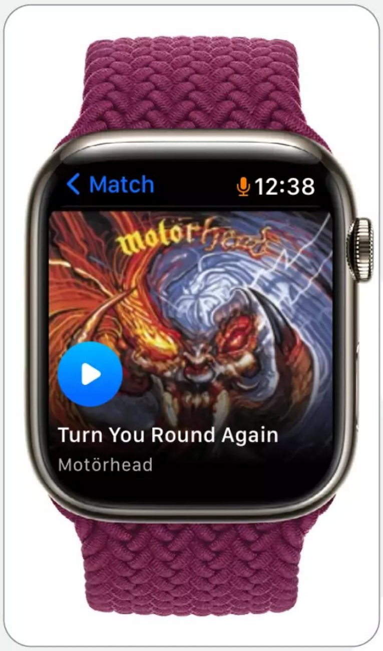
12:37
Tap to Shazam

Shazam on Watch

With Shazam on your Apple Watch, you need never wonder about a song title again. It's free, and has currently been installed over one billion times on various devices, including Apple's.







1 You can open the Shazam app from the Home screen, of course, but it also has a complication so you can open it directly from the watch face. It's shown here, in the top-right corner. Tap it to get straight to Shazam, quickly and easily.

2 When you hear a song you don't recognise but would like to know the title and the artist, open the Shazam app. Tap the graphic and Shazam listens to the song. It's able to identify songs even when there's a lot of ambient noise.

3 When Shazam has identified the song (it's surprisingly quick), it shows you the song title, artist and album cover. If you have access to the track, maybe through an Apple Music subscription, you can play it from your watch.

What3words – A Lifesaver?

What3words is an amazing app that could one day save your life. It's the easiest way to let someone know where you are, to an accuracy of three metres. Just open the app, and note the three words it offers for your location. Give them to someone, and they can type them into their own What3words app and find you.

12:47
Say a what3words address

1 Open the What3words app on your Apple Watch, and tap Location for this screen, which identifies your current whereabouts by giving them three words, in this case, laser.enable.opera. These are your location's three words.

2 Tap the three-dots icon for a list of options, which you can scroll up and down using your finger or the Digital Crown. Refresh gives you your three words again, Save saves your location and Share lets you send it to others.

3 Tap a Search button and you can say any three-word location to be shown where this is. If you get a phone call, for example, saying someone is at blobby.reproduced.annoying, you know they're in a lake in the northwest territories.

PCalc – Work it Out!

PCalc has long been the most respected calculator application for Apple devices, including the Mac, iPad, iPhone and, of course, the Apple Watch. Purchase and download the iPhone version of PCalc and the Apple Watch app is installed automatically on your watch. Give it a try – it's surprising how much it can do.

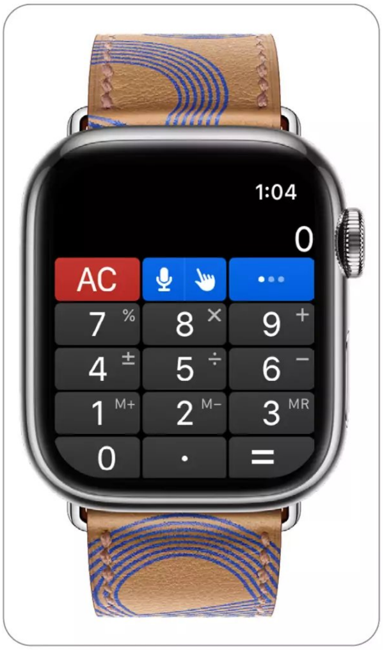
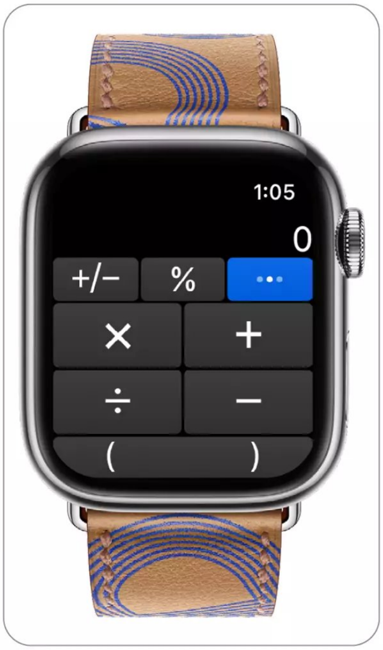
Features of PCalc on Watch

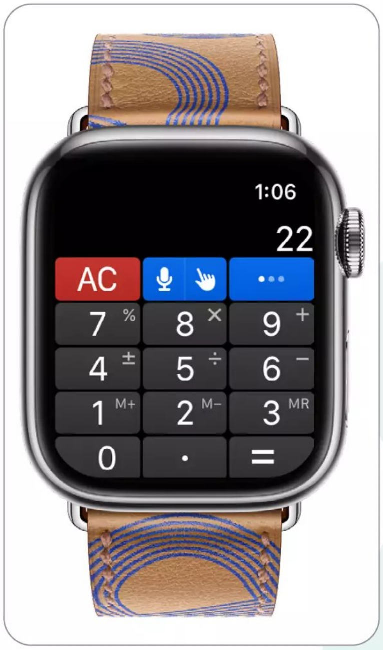
The Apple Watch component of the PCalc app does more than simple calculations. It can calculate tips, do trigonometric and logarithmic calculations, root and square root and even unit conversions, all from your wrist.



1 When you first open the PCalc app on your Apple Watch, you're shown a four-function calculator. Type in your first number, and when you need a function such as x, -, + or ÷, tap and hold the key it's shown on.



2 Alternatively, for a function, tap the blue button (top right), to go to this screen. Some might find the functions easier to access here, and you can also add brackets too. Tap the button again to return to the previous screen.



3 If you typed a number incorrectly, you can turn the digital crown to increase or decrease the last figure in your calculation. Remove the last thing typed by swiping right across the top of the screen, and left to redo it.

More Fun with Your Watch

There are all sorts of things you might not know your Apple Watch can do. Do you know how to check for new emails on your Apple Watch? How to restart the watch if it's having problems? How to get your watch to read the time to you? Turn Siri on and off? Change the watch band? Set up your watch for your left wrist? Cover the screen to silence the watch? Our feature on Things You Didn't Know Your Apple Watch Could Do covers all this and more. Look out too for a tutorial on solving problems your watch might be having, and a glossary of terminology used in this magazine.

Things You Didn’t Know Your Watch Can Do

Your Apple Watch can do much more than you possibly realised. Even if you’ve ploughed your way through our guides and tutorials, there are still small tips and tricks you might have missed. That’s what we’ll look at here; little things you might not know your Apple Watch can do, from simple time savers to fantastic features.

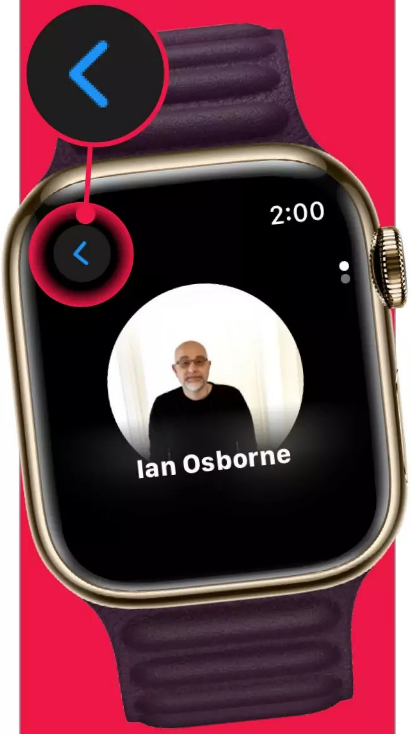
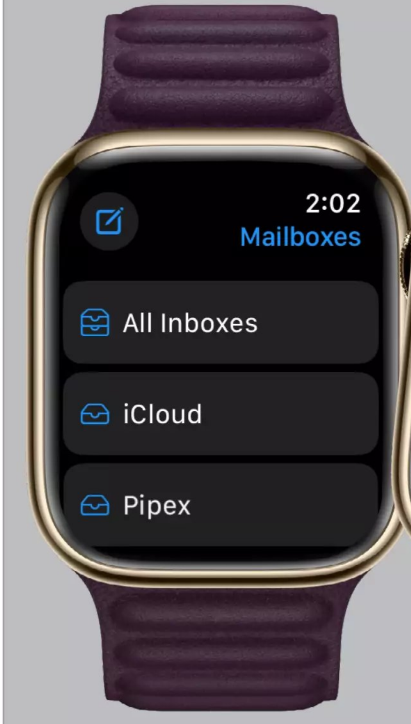
Go Back a Page

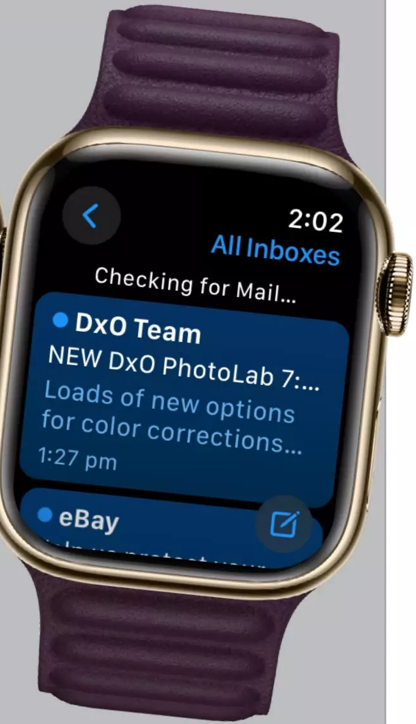


It’s a great trick if you don’t know it. To go back to the previous screen on your Apple Watch, tap the top left corner of the watch face. There’s usually (but not always), a chevron there to remind you.

Check for New Emails



1 To refresh your email inbox on your Apple Watch, first of all, open the Mail app and navigate to the screen where you choose which inbox to look at. Tap an inbox, or the All Inboxes option.

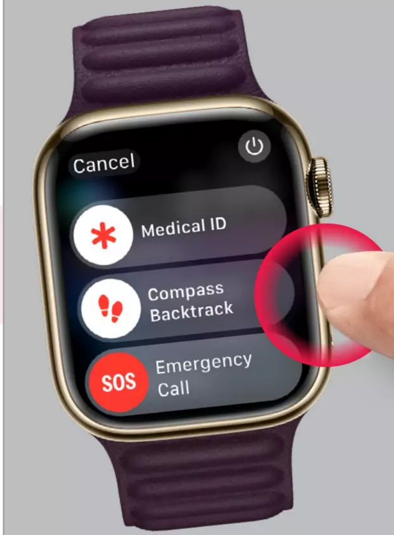


DxO Team
NEW DxO PhotoLab 7:...
Loads of new options for color corrections...
1:27 pm

eBay

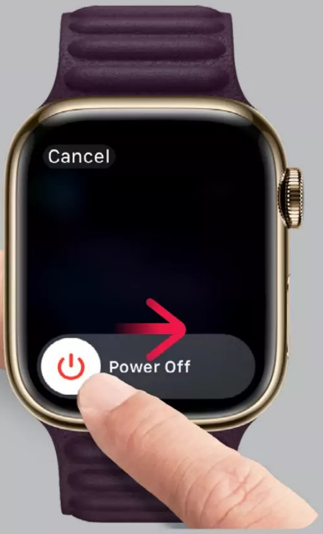
2 Scroll all the way down on your Digital Crown and at the top of the screen, you’ll see ‘Checking for Email...’ The watch checks for emails, and the message changes to ‘Updated Just Now’.

Turn Watch On and Off



Cancel
Medical ID
Compass Backtrack
SOS
Emergency Call

1 To turn your Apple Watch off, first of all, press and hold the Side Button. After a few seconds, you get a screen showing three sliders and a Power button in the top right corner.



Cancel
Power Off

2 Tap the Power button for this Power Off slider. Place your finger on the power icon and drag it right. The screen goes blank and you've successfully switched off your Apple Watch.

3 To switch your watch back on again, press and hold the Side Button until the Apple logo appears on-screen, and your watch starts up. Enter your passcode when asked.

Swipe Left to Delete

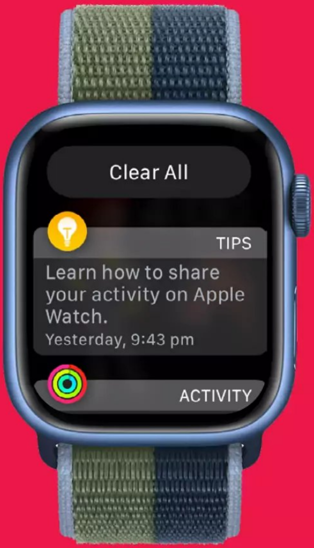
42m ago

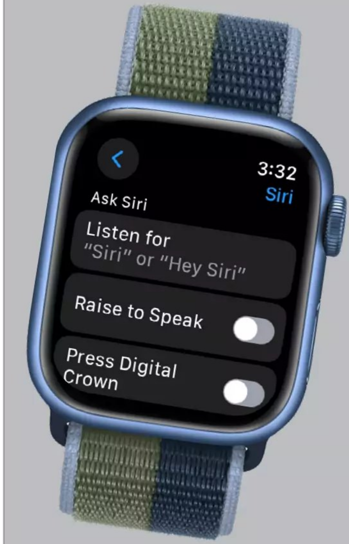


Learn how to share your activity on Apple Watch.
Yesterday, 9:43 pm

1 If you're finished with your notifications, you can clear them all from your Apple Watch in one go. First swipe down from the top of the watch face to access the Notifications screen.

2 Use the Digital Crown to scroll the notifications all the way to the top. Atop your notifications you'll see a button labelled 'Clear All'. Tap this and your notifications are cleared.

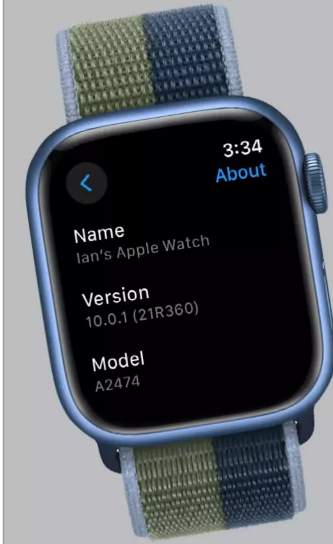
Turn Off Siri



Listen for "Siri" or "Hey Siri"
Raise to Speak ○
Press Digital Crown ○

If you don't use Siri, you can turn it off. On your watch, open the Settings app and open the Siri option. Turn off the top three switches (the ways to activate Siri), and the service is turned off.

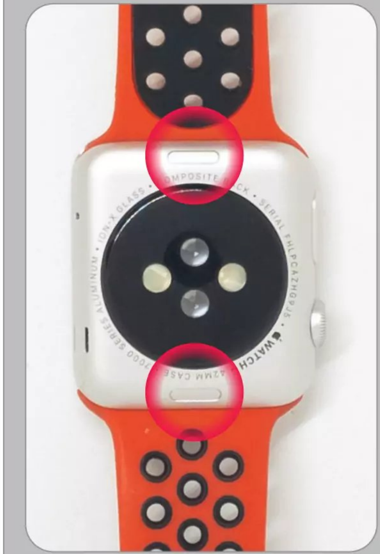
What's on Your Watch?



Name: Ian's Apple Watch
Version: 10.0.1 (21R360)
Model: A2474

Open the Settings app and go to General > About. You'll see a breakdown of what you've got on your watch, and also its serial and model number, what version of watchOS it has and more.

Change Watch Band



1 To change your watch band, first turn it face-down and press the button next to the band with your thumbnail. Slide out the band, then do the same with the other button.

2 Your new band simply slides in. Make sure you hear, or feel, it click into place. You can change the band as often as you like, and get new ones online or from Apple Stores.

Wake

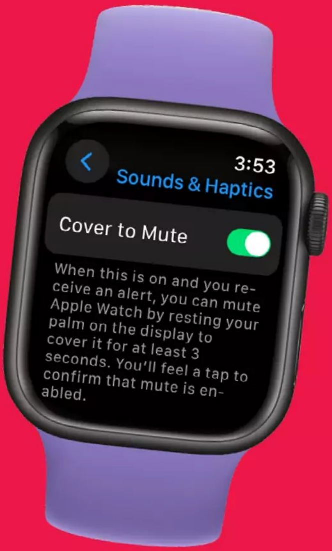
Your Apple Watch can always show the time. You can also choose if your complications show sensitive data.

1 You can change a lot of things in the Display and Brightness setting. Open the Settings app, and tap the Display & Brightness button to get to the customisable options.

2 You can make the display brighter or dimmer, which uses or saves battery power respectively. You can also alter the size of the text displayed on the watch face, or make it all bold.

3 Scroll up for more options, such as turning off the always-on display, changing what makes the watch wake from sleep and for how long it stays awake before going to sleep again.

Cover to Silence



3:53
Sounds & Haptics

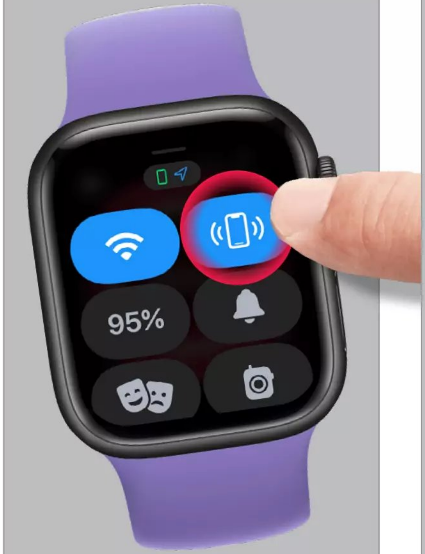
Cover to Mute

When this is on and you receive an alert, you can mute Apple Watch by resting your palm on the display to cover it for at least 3 seconds. You'll feel a tap to confirm that mute is enabled.

1 If your Apple Watch lights up or makes a noise at an inconvenient time or location, such as when you're in a meeting or in a movie theatre, you can silence it quickly and easily by placing your palm over the face of the watch and holding it there for around three seconds. The watch is instantly silenced, giving you instant peace and saving you from getting dirty looks from those around you.

2 To turn this feature on or off, in your iPhone's Watch app go to My Watch > Sounds & Haptics or on your watch, go to Settings > Sounds & Haptics and turn Cover to Mute on or off.

Ping Your iPhone



If you've misplaced your iPhone and you know it's somewhere nearby, on your watch, swipe up from the foot of the screen and tap the Ping iPhone button. Your phone makes a noise.

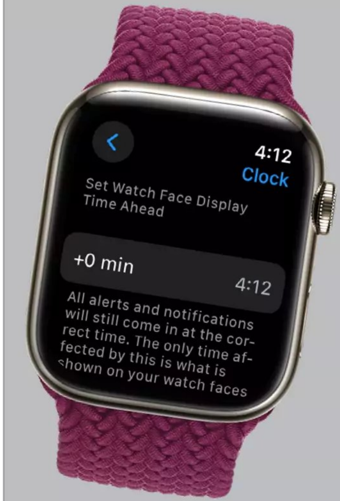
10
THU 28
7
MOSTLY CLOUDY 17°

1 The Apple Watch has a greyscale option, which shows the screen in shades of grey instead of colours; it's intended for the colourblind. To turn your screen grey, open the Settings app and go to Accessibility > Colour Filters

2 Tap the Colour Filters switch and choose between greyscale and various colour filters designed to help the colourblind. To switch this feature off again, repeat these steps and tap the Colour Filters switch to return the watch to displaying full colour.

Set Your Watch Fast



Set Watch Face Display Time Ahead

+0 min 4:12

All alerts and notifications will still come in at the correct time. The only time affected by this is what is shown on your watch faces

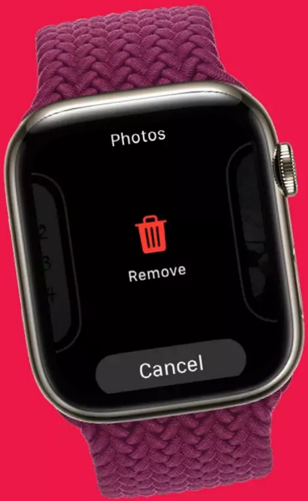
Some people like to set their watch a few minutes fast. To do this on an Apple Watch, go to Settings > Clock and tap the button in the centre, then add on up to 60 minutes. Alerts and alarms are not affected; they go off at the correct time.

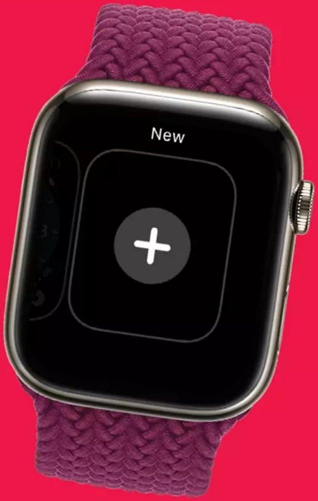
Open an App Using Siri

237
10
THU 28
7
MOSTL
UDY 18°

You can open an app using Siri. Hold the digital crown and say 'Open [app name]'. If your hands are full, you can launch Siri by saying 'Siri' or 'Hey Siri' too. So 'Siri/Hey Siri, open [app name]' launches an app of your choice without touching your watch.

Hide Watch Face





1 If there's a watch face you seldom use, you can hide it by deep pressing on the watch screen, swiping left or right to get to it and then swiping up, to see this remove icon. Tap it and the watch face is removed from the list found here.

2 Deleted watch faces aren't gone forever. They can be restored using the New button on the right of the watch faces. Tap it, then scroll to the face you deleted using the digital crown. When you've found it, tap it to restore it to the range.

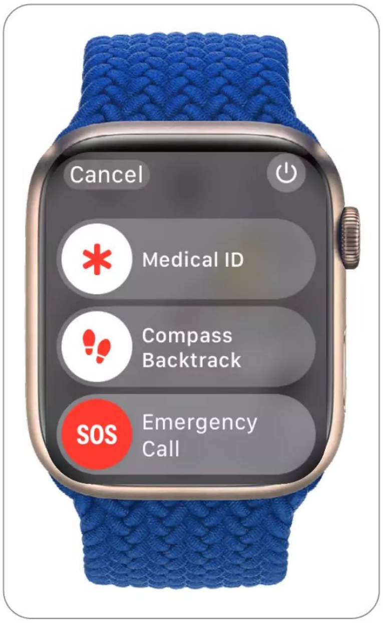
Problems and How to Solve Them

Like all Apple devices, your Apple Watch is very reliable but even the best tech can suffer problems occasionally. If you're having trouble with your amazing Apple Watch, check out these handy hints and terrific tips for getting it up and running again. Chances are one of them will work, saving you a trip to the Apple Store.

Restarting and Resetting Your Watch

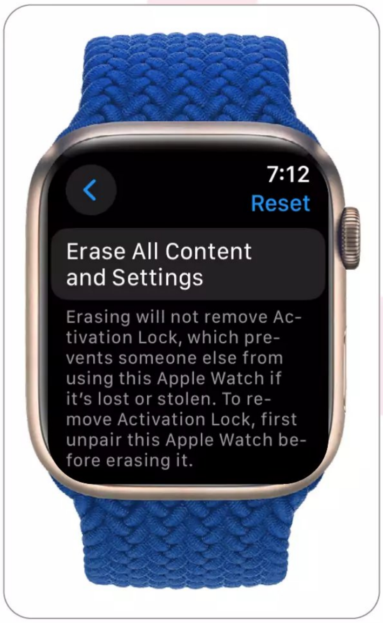
If your Apple Watch has frozen or is unresponsive, a force restart is usually all it needs but if this doesn't help, a hard reset might prove more successful. Here's how to do both on your Apple Watch.

Restart



Force Restart

Reset Watch



Erasing will not remove Activation Lock, which prevents someone else from using this Apple Watch if it's lost or stolen. To remove Activation Lock, first unpair this Apple Watch before erasing it.

To restart your Apple Watch, hold down the side button until this screen appears, tap the power icon (top right) then slide the slider marked Power Off to the right. To start it up again, press and hold the side button.

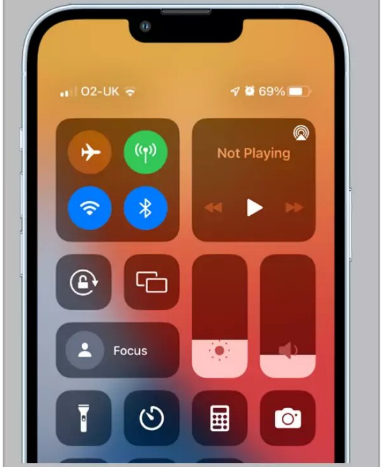
If this doesn't work or can't be achieved, press and hold both the Digital Crown and the side button for around ten seconds until the Apple logo appears on the watch screen. This forces your watch to restart.

To reset your watch completely, erasing all data, go to the Settings app and then go to General > Reset. Opting to reset your Apple Watch erases all data and settings, so you have to pair it with your iPhone again.

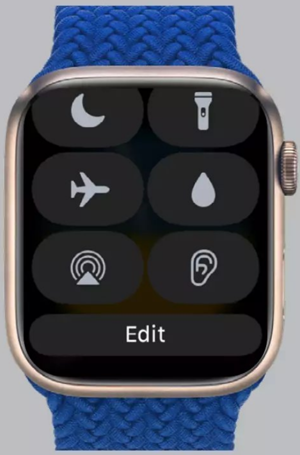
Other Problems with Your Watch

Of course not every hiccup suffered by your Apple Watch requires a complete restart or a reset. There are a number of minor maladies that can be solved quickly and easily. Here's a guide to what to do.

Lost iPhone Connection

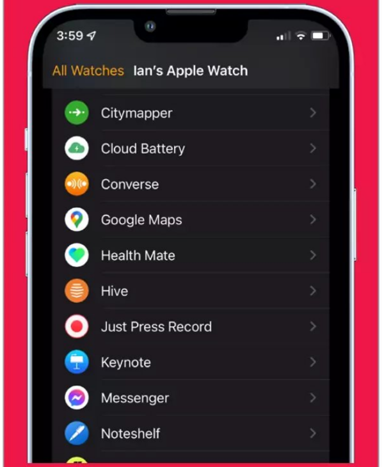


1 If your watch has lost the connection with your iPhone, first check your iPhone's Bluetooth is switched on. Swipe down from the top-right corner of the screen for the Control Panel, and check the Bluetooth icon is blue.

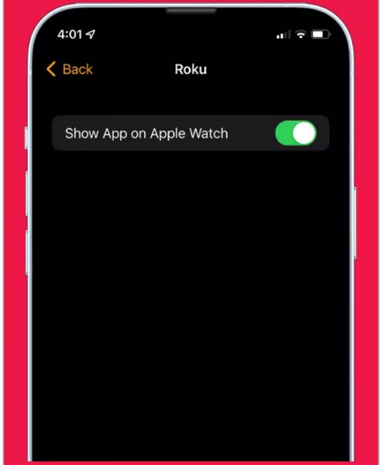


2 Now press the Side Button on your Apple Watch to get to the Control Centre and scroll with the Digital Crown to here. Turn Airplane Mode on and off by tapping the plane icon to force the watch to look for your iPhone and reconnect.

Third Party App Doesn't Work



1 If one of your third-party Apple Watch apps refuses to work properly, try removing and reinstalling it. On your iPhone's Watch app, go to My Watch and scroll down to the app that's not working.



Show App on Apple Watch ●

2 Tap on the name of the rogue app and on this, the next screen, flick the switch marked Show App On Apple Watch off. The app uninstalls from the watch. Now flick the switch again to reinstall it.

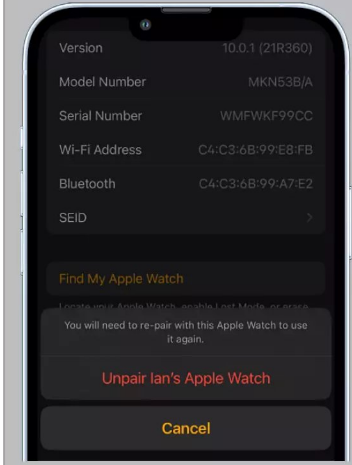
Locate your Apple Watch, enable Lost Mode, or erase it using the Find My app.

Unpair Apple Watch

1 For a more drastic restore, go to the iPhone's Watch app, tap My Watch then tap All Watches in the top-left corner. Tap the 'i' icon next to your watch. Now tap the last option on this screen, Unpair Apple Watch.



You will need to re-pair with this Apple Watch to use it again.

Unpair Ian's Apple Watch

Cancel

2 In the pop-up window, opt to unpair the watch. Settings and data are backed up, with a few exceptions such as Activity Monitor and bank cards. After unpairing, you must pair your watch again before using it.

Glossary of Watch Terminology

We've tried to keep this guide as jargon free as possible, but inevitably there are some words and phrases that might still seem mysterious to the newcomer. If you're puzzled, we hope you find this glossary helpful.

A

Accessibility: A series of tools and features designed to make an Apple device such as the Apple Watch easier to use by those with disabilities. You can find the Accessibility features in Settings.

Activity: A key app on your Apple Watch that records how many calories you've expended by moving around, how many minutes you've exercised and whether you've stood for at least a couple of minutes each hour. The Activity app gives you targets to aim for; 500 calories, 30 minutes and 12 hours by default, but they can be customised if you wish. You can share your Activity stats with friends, and win awards by meeting targets.

Airplane Mode: All airlines warn you to turn off mobile electronic devices when on an aircraft, so this Apple Watch setting turns off all incoming and outgoing signals to your device, including data, Bluetooth, and Wi-Fi.

AirPlay: A protocol for streaming sounds and video from an Apple device to compatible speakers, or (for example) an Apple TV. It's wireless, and easy to use.

AirPods: Apple's own in-ear Bluetooth earbuds. Pair them with your iPhone, and they automatically pair with your Apple Watch too. You can then play music directly from the watch, without using your iPhone.

App: Short for 'application', another name for a computer program as used on iPhones and iPads, and also on the Apple Watch. Apps for the Apple Watch can be downloaded on the iPhone or on the watch itself.

App Store: This is where you can download free and paid-for programs, or apps, to your device using your Apple ID. You can access it through your iPhone's or Apple Watch's Home screen.

Apple ID: This is the email address and password that you have registered with Apple. It's required for a lot of applications and features on your iPhone and Apple Watch, such as App Store, Find Items and more.

Apple Pay: With your credit or debit card information stored on your iPhone, you can use your Apple Watch to make contactless payments for goods and services. Double tap the side button to access Apple Pay, then hold your watch near the contactless payment machine. The watch vibrates, and the money is taken from your account.

B

Blood Oxygen: Your blood oxygen level shows the amount of oxygen your blood is carrying around your body. You can test your personal blood oxygen level with your Apple Watch.

Bluetooth: Bluetooth is a wireless technology used to link and exchange data with another compatible device. It has a range of approximately 8 metres (25ft). Apple Watch supports many Bluetooth devices, and can be configured using the Bluetooth option in the Settings app.

C

Calendar: This is one of Apple's preloaded apps. Use it to keep track of events, invitations, and reminders on your Apple Watch, Mac or mobile devices.

Camera: This app is used when taking photos and videos on your iPhone. The Apple Watch can function as a camera remote, so you can take iPhone photos directly from your wrist without touching the phone.

Charger: The USB cable used to charge your Apple Watch. It plugs into a USB-C or USB-A port, and can be bought separately from Apple if you need a spare.

Complications: In watchmaking, small features such as extra dials or a sun and moon behind the main watch face are known as **Complications.** The Apple Watch uses the same term for the extras on the watch face that take information from, and give access to, the watch's apps.

Contacts: Your digital address book, which syncs across your Apple devices using iCloud. On your Apple Watch, you can review your stored contacts' information, initiate an email, phone call, message and more, share a contact or delete it if it's no longer needed.

D

Digital Crown: A key control on the Apple Watch. It combines a button which can be pressed for the Home screen, held for Siri or double-pressed to return to the last-used app, and a dial that lets you scroll through various options and items on your Apple Watch.

Dock: The Apple Watch has a Dock, just like the Mac, iPhone and iPad. It can show recently used or favourite apps. Access the Apple Watch Dock by pressing the side button, and scroll through your apps with the digital crown.

E

ECG: An abbreviation of electrocardiogram, a test that records the timing and strength of the electrical signals that make the heart beat. You can take one on the Apple Watch using the ECG app.

Emoticon: A small drawing used to augment a message or text. Typically, these are yellow faces showing a variety of expressions.

F

Facebook: Currently the most popular social networking site on the Internet. Its integrated messaging app, Facebook Messenger, has an Apple Watch component that lets you review and reply to conversations.

FaceTime: You can join group FaceTime chats using your Apple Watch, but obviously, only using FaceTime Audio; the Watch has no camera, so can't do video.

Find Devices/Items/People: The iPhone's Find My app, for tracking down Apple Macs and mobile devices, locating AirTags and AirPods and sharing your location with others is represented on the Apple Watch by three different apps. Tap one to pinpoint the whereabouts of a device, tracked item or person on the map.

F

Focus: A feature on most Apple devices that lets you limit interactions with your Mac, iPad, iPhone and Apple Watch at certain times, for example, when working or driving. You can turn a Focus on and off from your Apple Watch.

Force Restart: If your Apple Watch isn't behaving as it should, you can force it to switch off and restart; press and hold the side button and digital crown for around ten seconds, until you see the Apple logo appear. Doing this can solve a range of problems on your Apple Watch.

G

Gestures: Actions performed with your fingers on the Apple Watch's touchscreen. These gestures aren't as comprehensive as those used on the iPhone or the Mac's trackpads.

H

Home Screen: The Apple Watch's Home screen is where you open apps, and it's accessed by pressing the digital crown. The watch's Home screen can display your apps as a grid or as a list.

I

iCloud: The collective name for Apple's online services, which integrates with all iOS/iPadOS devices, Macs and the Apple Watch.

iMessage: A text message that's sent from one Apple device to another. iMessages use the Internet rather than the mobile phone network, so they're sent free of charge.

K

Keynote: Apple's presentation app for Macs and mobile devices. The Apple Watch companion app acts as a controller.

L

Location Services: Features and apps on your Apple Watch that pinpoint and use your current location. The Maps app, for example.

M

Mail: Apple's email client, which has a watch component. It can handle a wide range of email accounts, including Apple iCloud, Microsoft's and Google's mail services and accounts provided by your Internet Service Provider.

Memoji: Open the Memoji app and you can create a caricature of yourself, or someone else, on your watch, and then use it in the Memoji watch face.

Messages: One of Apple's built-in apps that handles SMS text messages and MMS multimedia messages.

Mindfulness: A watch app that helps you set aside a few minutes every day to focus, centre and breathe. The Breathe watch face gives easy access to the Mindfulness app, which some people say helps them relax.

Music: The Apple Watch's app for playing music, which also works as a controller for the iPhone's Music app.

N

News App: A useful media application that I collates news sources from across the web. It can be customised to focus on news that interests you personally.

Noise: A useful bundled Apple Watch app that checks the volume of ambient noise levels, and warns you if it's loud enough to damage your hearing.

Notifications: A pull-down list of recent notifications, accessed by swiping the Apple Watch screen down from the top.

Now Playing: If any app is playing audio on your Apple Watch or iPhone, the Now Playing icon appears atop the screen. Tap it for controls.

P

Photos: A bundled Apple Watch application that lets you view and share photographs directly from your watch.

Portraits: If your iPhone can take Portrait photos, with the subject in focus but the background blurred (the bokeh effect), you can use them in the Apple Watch's Portraits face.

Q

QuickPath: The latest Apple Watch models offer a virtual keyboard used by tapping the letters or by swiping a finger from one letter to the next. Typing suggestions are offered, and you can correct a mistake by scrolling the digital crown.

R

Retina Display: This is Apple's term for its high-resolution screens. The pixels are so small it's impossible to distinguish between them at a normal viewing distance. Apple Watch has a Retina screen.

S

Scribble: A means of typing on your Apple Watch, by drawing individual letters on the watch face.

Settings: An app on your Apple Watch that gives access to configurable features. There's an entry in Settings for every app on your watch, whether a default app or one you've added yourself.

Siri: Apple's voice activated digital assistant. You can give Siri spoken instructions and the service replies by giving you the information you asked for, or by activating the requested Apple Watch function.

Sleep/Wake Button: Physical hardware button on top of the iPhone, iPod touch, and iPad. Used to power on, wake from sleep, put to sleep, and power down iOS devices.

Sleep App: This is used to track your sleeping habits and set up bedtime schedules. You can see how much sleep you got last night, and follow your sleeping trends over the last 14 days.

Smartwatch: A watch that functions as a piece of digital technology that can run apps for things like measuring exercise, health, heart rates and other things that require sensors. The Apple Watch is a smartwatch.

SMS: (Short Message Service) Text messages sent from the Messages app. Apple Watch has standard messages, or you can speak/type your own.

SOS: A service on Apple Watch that lets you call the emergency services from your watch, store medical information and detect if you've fallen over.

Straps: The Apple Watch uses its own unique strap design. Apple Watch straps include Loops, Sports Bands, Modern Buckles and other styles.

T

Touchscreen: A screen that responds to your touch, so you can interact with it using your fingers or a stylus.

W

Walkie-Talkie: An innovative feature that facilitates two-way communication between Apple Watches. Requires Apple Watch Series 1 or later running watchOS 5.3 or later.

watchOS: The operating system that underpins everything that goes on in your Apple Watch. This operating system (or OS) is regularly updated, and new versions are free of charge.

Wi-Fi: A wireless of means of getting onto the Internet or connecting two devices. At home, your Wi-Fi network is established through your router. Whilst away from home, you might have access to public Wi-Fi networks like those offered in coffee shops or libraries.
